

## PL-900 Dumps

### Microsoft Power Platform Fundamentals

<https://www.certleader.com/PL-900-dumps.html>

**NEW QUESTION 1**

A company is building a Power Apps portal.

You need to select out-of-the-box portal types to meet the company's requirements.

Which portal types should you use? To answer, drag the appropriate portal types to the correct requirements. Each portal type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Portal types	Requirement	Portal type
partner portal		
community portal	Collaboratively onboard new suppliers and distributors.	Portal type
portal from blank	Publish a blog post announcing new suppliers.	Portal type
customer self-service portal		

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Box 1: Partner portal

A partner portal allows every organization with resellers, distributors, suppliers, or partners to have real-time access to every stage of shared activities.

Box 2: Community portal

A community portal leverages peer-to-peer interactions between customers and experts to organically grow the catalog of available knowledge from knowledge base articles, forums, and blogs as well as providing feedback through comments and ratings.

**NEW QUESTION 2**

You create a user-owned custom entity by using Common Data Service.

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Statement	Yes	No
You can change the entity ownership from User to Organization-owned.	<input type="radio"/>	<input type="radio"/>
You can create a business rule for a custom entity that can be used in a Flow.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Box 1: No

Common Data Service supports two types of record ownership. Organization owned, and User or Team owned. This is a choice that happens at the time the entity is created and can't be changed.

Box 2: Yes

By combining conditions and actions, you can do any of the following with business rules: Set field values

Clear field values

Set field requirement levels Show or hide fields

Enable or disable fields

Validate data and show error messages

Create business recommendations based on business intelligence.

**NEW QUESTION 3**

A toy company creates a text classification model in AI Builder to monitor customer feedback for specific key words.

When negative feedback is received for a toy, the company wants to proactively perform engineering reviews for the toy and schedule additional training sessions for workers who produce the toy.

What are two possible ways to achieve the goal? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Create a canvas app.
- B. Implement the Virtual Agent.
- C. Build a Microsoft Flow.
- D. Use the Common Data Model.

**Answer:** AC

**Explanation:**

A (not D): AI Builder comes with:

A ready-to-use business card reader available in canvas as well as in model-driven apps. Business card reader (Canvas)

Business card reader (Model-driven)

Additional canvas components to leverage your AI Builder form processing or object detection models canvas apps.

C: Use the results from your AI model across Power Platform to create end-to-end solutions that meet your business needs, even if you have no coding skills. For example, create a flow that automates document processing in Power Automate, or an app created with PowerApps that predicts whether a supplier will be out of compliance.

**NEW QUESTION 4**

You are a customer service manager.

You need to implement a Power Apps portal that allows customers to submit cases. Which type of data source is used?

- A. Dynamics 365 Connector
- B. Microsoft SharePoint
- C. Microsoft Azure Storage
- D. Common Data Service

**Answer:** B

**Explanation:**

SharePoint can be set up to setup customer feedback.

Note: The PowerApp uses Finance and Operations connector to grab sales order information and SharePoint connector to connect and write the data to SharePoint list.

**NEW QUESTION 5**

A coworker is creating an app in Power Apps and needs to automatically synchronize data from an external source. The coworker is unable to locate a suitable Microsoft approved connector template in AppSource.

You need to recommend a solution for the coworker. What should you recommend?

- A. Create a custom connector.
- B. Ask the outside source to send you the data once a week.
- C. Use Microsoft Flow to connect to the database.
- D. Open a ticket with Microsoft and request a new connector.
- E. Use Microsoft Azure Service Bus.

**Answer:** A

**Explanation:**

There are 250 + predefined connectors that you can use in your PowerApps and in your Microsoft Flows. If you do not find any that suits your needs you have the possibility to create a Custom Connector.

Note: A Custom Connector is a wrapper around a REST API (Logic Apps also supports SOAP APIs) that allows Logic Apps, Microsoft Flow, or PowerApps to communicate with that REST or SOAP API.

**NEW QUESTION 6**

A company plans to use Power BI to visualize data from business systems.

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Statement	Yes	No
You can display data aggregates and raw data in a Power BI report.	<input type="radio"/>	<input type="radio"/>
You can display related data from Dynamics 365 Customer Engagement and Excel in the same Power BI report.	<input type="radio"/>	<input type="radio"/>
You create a Power App to supply data for a Power BI report. You can modify the data directly in the report.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Box 1: Yes

The following list provides advantages to using aggregations:

Query performance over big data - as users interact with visuals on Power BI reports, DAX queries are submitted to the dataset. Boost query speeds by caching data at the aggregated level, using a fraction of the resources required at the detail level. Unlock big data in a way that would otherwise be impossible.

Box 2: No

You can connect to model-driven apps in Dynamics 365 with Power BI Desktop to create custom reports and dashboards for use with the Power BI service.

You can use similar steps to connect to model-driven apps in Dynamics 365 using Office Excel Power Query by selecting From Other Sources on the Power Query tab in Excel.

Box 3: Yes

Using the PowerApps custom visual, you will be able to pass context aware data to a PowerApps app which updates in real time as you make changes to your report.

**NEW QUESTION 7**

A company uses Dynamics 365 Sales. The company uses a browser-based app named Sales Hub. You need ensure that users can access data from mobile devices.

Which app should users install?

- A. Dynamics 365 Remote Assist
- B. Dynamics 365 Finance
- C. Dynamics 365 Business Central
- D. Dynamics 365 for Phones

**Answer:** D

**Explanation:**

Use the Dynamics 365 for phones and Dynamics 365 for tablets apps for your sales, customer service, field service, and other tasks when you're on the go. With one download from your app store, you'll automatically have access to all the apps you need for your role. You will see apps with the new Unified Interface on your mobile device.

**NEW QUESTION 8**

This question requires that you evaluate the BOLD text to determine if it is correct.

You have a Power Apps app. You create a new version of the app and then publish the new version. A customer goes through the process of restoring the previous version of the app. In the Version tab for the app, you will see two versions of the app.

Review the underlined text. If it makes the statement correct, select "No change is needed." If the statement is incorrect, select the answer choice that makes the statement correct.

- A. No change is needed.
- B. one
- C. three
- D. four

**Answer:** C

**Explanation:**

Restore a canvas app to a previous version in PowerApps.

1. Open powerapps.com, and then click or tap Apps in the left navigation bar.
2. Near the right edge, click or tap the info icon for the app that you want to restore.
3. Click or tap the Versions tab, and then click or tap Restore for the version that you want to restore.

Details • Share • Versions • Settings • Analytics (preview)

PowerApps keeps a version history of your apps.

VERSION	MODIFIED	MODIFIED BY	POWERAPPS RELEASE	PUBLISHED	COMMENT
2	8/20/2018 2:24:29 PM	Firstname Lastname	3.18081.19	Live	
1	7/9/2018 10:55:48 AM	Firstname LastName	3.18071.36		Restore Delete

4. In the confirmation dialog box, click or tap Restore. A new version is added to your list.

Details • Share • Versions • Settings • Analytics (preview)

PowerApps keeps a version history of your apps.

VERSION	MODIFIED	MODIFIED BY	POWERAPPS RELEASE	PUBLISHED	COMMENT
3	8/20/2018 2:41:30 PM	Firstname Lastname	3.18071.36		Publish this version
2	8/20/2018 2:24:29 PM	Firstname Lastname	3.18081.19	Live	Restore Delete
1	7/9/2018 10:55:48 AM	Firstname Lastname	3.18071.36		Restore Delete

**NEW QUESTION 9**

A distribution company has multiple warehouses.

Tax rates charged on sales orders need to be calculated based on locality and region. You need to recommend a cost-effective solution that can be implemented quickly. What should you recommend?

- A. Check AppSource for a tax add-on.
- B. Create alerts in Dynamics 365 Finance for tax table changes.
- C. Implement the Common Data Model.
- D. Run a Power BI report.
- E. Write scripts and code tax updates.

**Answer:** B

**NEW QUESTION 10**

A company uses Dynamics 365 Supply Chain Management.

When a sales order is created for one of the customers that a specific user manages, a Microsoft Outlook task must be created to remind the user to perform any follow up activities that are required.

You need to implement the functionality to create Outlook tasks.

Which two features should you use? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. AI Builder
- B. Power Apps
- C. Business Events
- D. Microsoft Flow
- E. Common Data Service

**Answer:** CD

**Explanation:**

Business events in Microsoft Power Automate

Business events can be consumed in Microsoft Power Automate via the application connector. The connector has a trigger that is named when a business event occurs. This trigger can be used to subscribe to any of the business events that are available in the target instance of the application.

**NEW QUESTION 10**

You plan to use Microsoft Flow to monitor what people are saying about your company's products. You store the feedback for research and development

purposes.

You need to recommend Flow components to use for the solution.

To answer, drag the appropriate components to the correct requirements. Each component may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Components	Answer Area	Requirement	Component
action			
expression		Retrieve the top five posts from your company's Facebook page.	Component
service		Enter the resulting posts into the product database.	Component
trigger		Combine author and link fields into a single field.	Component
flow type		Run flow every hour.	Component

Components	Answer Area	Requirement	Component
action			
expression		Retrieve the top five posts from your company's Facebook page.	trigger
service		Enter the resulting posts into the product database.	action
trigger		Combine author and link fields into a single field.	expression
flow type		Run flow every hour.	flow type

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Box 1: Trigger

A trigger is something that triggers or starts the workflow. It could be a new file uploaded to a document library, a new item created in the list or an email sent to your Inbox – something that will start (kick-off the workflow).

There are two types of triggers:

- > Automatic trigger is pre-programmed into the workflow based on a certain rule (i.e. new document or item created, email sent, etc.)
- > Manual Trigger is a trigger initiated by a user. Unlike with automatic trigger above, the workflow will only start when initiated manually by the end user (for example, from the Document Library for a selected file). Manual trigger is only supported for certain types of workflows (i.e. Get feedback from your manager for the selected file)

Box 2: action

An action is something that occurs as a result of the workflow. Box 3: expression

Sometimes users just need to do basic operations like getting the current time, adding numbers together, or replacing a part of a string of text. That's possible

inline in any flow action. Microsoft Flow leverages the same Workflow Definition Language used by Azure Logic apps. For new users who are unfamiliar with the expression language, there is an inline help experience that shows how to use each expression as they build out their flow.

Box 4: flow type

There are four different Flow types that you can choose from when starting out. You can create a scheduled flow, automated flow, instant flow, or a business process flow.

**NEW QUESTION 11**

You are new to working with Microsoft Flow. You create a flow that extracts birth dates for users and then sends a birthday greeting email to users on their birthday.

The flow does not properly extract birth dates. Where should you make changes?

- A. Connectors
- B. Expression
- C. Templates

**Answer:** A

**Explanation:**

Select the new Date Time connector. There you will see all of the actions, which help you to convert time zones to format them for local time in an email, add or subtract times, or just get the current time.

**NEW QUESTION 12**

A company needs to create a series of mobile applications to empower their field engineers to accomplish several tasks with varying degrees of complexity. Match each option to its answer.

Instructions: To answer, drag the appropriate app type from the column on the left to its definition on the right. Each app type may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

App types	Answer Area	
model-driven		<b>Definition</b>
dashboard	Quickly create apps for very complex business processes with very little or no code.	App type
dataset	Create simple apps with a highly customizable user interface layouts.	App type
canvas		

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Box 1: canvas

Both model-driven and canvas apps allow you to easily build business apps. They both share access to the Common Data Service providing standard and custom entities. Canvas apps start with your user experience, crafting a highly tailored interface with the power of a blank canvas and connecting it to 200 data sources. Canvas apps can be built for web, mobile, and tablet applications. Model-driven apps start with your data model – building up from the shape of your core business data and processes in the Common Data Service to model forms, views, and other components. Model-driven apps automatically generate great UI that is responsive across devices.

Box 2: model-driven

**NEW QUESTION 15**
