NEW QUESTION 5

- (Exam Topic 2)

A bank uses Power Platform apps and flows to support business processes.

The company would like to use historical client data to predict whether a client's loan application is likely to be approved or rejected.

You need to use AI Builder to implement the solution.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Answer area

Publish the model.

Export data into AI Builder.

Train the model.

Import data into Common Data Service.

Use the model in PowerApps or Microsoft Flow.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Step 1: Import data into Common Data Service.

AI Builder requires the use of Common Data Service, which is the data platform for PowerApps and allows you to store and manage business data. Common Data Service is the platform on which Dynamics 365 apps are built so if you're a Dynamics 365 customer, your data is already in Common Data Service.

Step 2: Train the model Step 3: Publish the model

The last step is to publish your model.

Step 4: Use the model in PowerApps or Microsoft Flow. Reference:

<https://docs.microsoft.com/en-us/ai-builder/build-model>

NEW QUESTION 6

- (Exam Topic 2)

What is a benefit of deploying Microsoft 365 and Dynamics 365 apps in the same tenant?

- A. Use Common Data Services to connect to application data.
- B. You only need to set up groups in Microsoft 365 for permissions to all data.
- C. Users can access both Microsoft 365 and Dynamics 365 by using Single Sign-on (SSO).

Answer: A

NEW QUESTION 7

- (Exam Topic 2)

A company plans to implement solutions that use Common Data Service as a data storage.

You need to recommend features to meet the company's needs.

Which features should you recommend? To answer, drag the appropriate features to the correct requirements. Each feature may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

| Features | Requirement | Feature |
|------------------------|--|---------|
| business rules | Validate data across multiple fields and entities regardless of the app used to create data. | Feature |
| business process flows | Create visual guides to ensure that users enter data and perform tasks in a consistent manner. | Feature |
| Common Data Model | Accelerate development by using a standard set of entities for the most common scenarios. | Feature |

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: business rules

You can create business rules and recommendations to apply logic and validations without writing code or creating plug-ins. Business rules provide a simple interface to implement and maintain fast-changing and commonly used rules.

Box 2: business process flows

Flows Power Automate includes several types of processes, each designed for a different purpose:

- > Automated flows. Create a flow that performs one or more tasks automatically after it's triggered by an event.
- > Button flows. Perform repetitive tasks simply by tapping a button on your mobile device.
- > Scheduled flows. Create a flow that performs one or more tasks on a schedule such as once a day, on a specific date, or after a certain time.
- > Business process flows. Ensure that people enter data consistently and follow the same steps every time they work in an app by creating a business process flow.
- > Workflows and actions. Dynamics 365 customizers may be familiar with the classic Common Data Service processes, which are workflows and actions.

Box 3: Common Data Model

Model-driven app design is a component-focused approach to app development. Model-driven app design doesn't require code and the apps you make can be simple or very complex. Unlike canvas app development where the designer has complete control over app layout, with model-driven apps much of the layout is determined for you and largely designated by the components you add to the app.

Reference:

- <https://docs.microsoft.com/en-us/powerapps/maker/model-driven-apps/guide-staff-through-common-tasks-proce>
- <https://docs.microsoft.com/en-us/powerapps/maker/model-driven-apps/model-driven-app-overview>

NEW QUESTION 8

- (Exam Topic 3)

A company needs to create a series of mobile applications to empower their field engineers to accomplish several tasks with varying degrees of complexity.

Match each option to its answer.

Instructions: To answer, drag the appropriate app type from the column on the left to its definition on the right. Each app type may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

| App types | Definition | App type |
|--------------|--|----------|
| model-driven | Quickly create apps for very complex business processes with very little or no code. | App type |
| dashboard | Create simple apps with a highly customizable user interface layouts. | App type |
| dataset | | |
| canvas | | |

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: canvas

Both model-driven and canvas apps allow you to easily build business apps. They both share access to the Common Data Service providing standard and custom entities. Canvas apps start with your user experience, crafting a highly tailored interface with the power of a blank canvas and connecting it to 200 data sources. Canvas apps can be built for web, mobile, and tablet applications. Model-driven apps start with your data model – building up from the shape of your core business data and processes in the Common Data Service to model forms, views, and other components. Model-driven apps automatically generate great UI that is responsive across devices.

Box 2: model-driven Reference:

NEW QUESTION 9

- (Exam Topic 3)

A company manages a chain of retail stores. The company stores a list of retail store names and numbers in one Power BI table. The company stores sales transaction data including a transaction ID in another table.

The transaction ID includes the store number.

You need to show the store name for all retail transactions in all Power BI reports.

Which tool should you use?

- A. Query Editor
- B. Power BI Service
- C. Microsoft Excel
- D. Data Connector

Answer: A

Explanation:

Power BI Desktop comes with Query Editor, where you can connect to one or many data sources, shape and transform the data to meet your needs, then load that model into Power BI Desktop.

Reference:

<https://docs.microsoft.com/en-us/power-bi/desktop-query-overview>

NEW QUESTION 10

- (Exam Topic 3)

You have a Power BI report.

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

| Statement | Yes | No |
|---|-----------------------|-----------------------|
| You can export data from a visualization in a Power BI report. | <input type="radio"/> | <input type="radio"/> |
| You can show the data behind a visual report on your screen without exporting the data. | <input type="radio"/> | <input type="radio"/> |
| You must export data to view supporting data for a KPI. | <input type="radio"/> | <input type="radio"/> |

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: Yes

If you'd like to see the data that Power BI uses to create a visualization, you can display that data in Power BI. You can also export that data to Excel as an .xlsx or .csv file. The option to export the data requires a Pro or Premium license and edit permissions to the dataset and report.

Note: Export data from a Power BI dashboard

- > Select the ellipsis in the upper-right corner of the visualization.
- > Choose the Export data icon.
- > Power BI exports the data to a .csv file. If you've filtered the visualization, then the app will filter the downloaded data.
- > Your browser will prompt you to save the file. Once saved, open the .csv file in Excel.

Box 2: No

Underlying data: Select this option if you want to see the data in the visual and additional data from the model (see chart below for details). If your visualization has an aggregate, selecting Underlying data removes the aggregate. When you select Export, Power BI exports the data to an .xlsx file and your browser prompts you to save the file. Once saved, open the file in Excel.

Box 3: Yes

A KPI dataset needs to contain goal values for a KPI. If your dataset doesn't contain goal values, you can create them by adding an Excel sheet with goals to your data model or PBIX file.

Note: A Key Performance Indicator (KPI) is a visual cue that communicates the amount of progress made toward a measurable goal.

 - > Product Lines
 - > Sales Territories
- Administration
 - > User Admin
 - > Users
 - > Roles

You need to create the app navigation.

Which sitemap component types should you use? To answer, drag the appropriate component types to the correct navigation elements. Each component type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

NEW QUESTION 15

- (Exam Topic 4)

A user is trying to understand the differences between the various ways apps can be built by using Power Apps.

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

| Statement | Yes | No |
|---|-----------------------|-----------------------|
| You can embed canvas apps in model-driven apps. | <input type="radio"/> | <input type="radio"/> |
| A Power Apps portal can use only one data source. | <input type="radio"/> | <input type="radio"/> |
| You must use Power BI to create reports in model-driven apps. | <input type="radio"/> | <input type="radio"/> |

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: Yes

You can create a canvas app and then embed that within a model driven app.

Box 2: No

With the capability to build a portal in PowerApps, you can create a website for external and internal users enabling them to interact with data stored in Common Data Service.

Note: Common Data Service lets you securely store and manage data that's used by business applications. Data within Common Data Service is stored within a set of entities. An entity is a set of records used to store data, similar to how a table stores data within a database. Common Data Service includes a base set of standard entities that cover typical scenarios, but you can also create custom entities specific to your organization and populate them with data using Power Query. App makers can then use PowerApps to build rich applications using this data.

Box 3: Yes

To get started building a report you'll need the latest version of Power BI Desktop and a PowerApps environment with the latest version of the Common Data Service.
