

Isaca

Exam Questions CISA

Isaca CISA

NEW QUESTION 1

- (Topic 1)

Which of the following would be the BEST method for ensuring that critical fields in a master record have been updated properly?

- A. Field checks
- B. Control totals
- C. Reasonableness checks
- D. A before-and-after maintenance report

Answer: D

Explanation:

A before-and-after maintenance report is the best answer because a visual review would provide the most positive verification that updating was proper.

NEW QUESTION 2

- (Topic 1)

Which of the following is a dynamic analysis tool for the purpose of testing software modules?

- A. Blackbox test
- B. Desk checking
- C. Structured walk-through
- D. Design and code

Answer: A

Explanation:

A blackbox test is a dynamic analysis tool for testing software modules. During the testing of software modules a blackbox test works first in a cohesive manner as one single unit/entity, consisting of numerous modules and second, with the user data that flows across software modules. In some cases, this even drives the software behavior.

NEW QUESTION 3

- (Topic 1)

Which of the following is MOST likely to result from a business process reengineering (BPR) project?

- A. An increased number of people using technology
- B. Significant cost savings, through a reduction in the complexity of information technology
- C. A weaker organizational structures and less accountability
- D. Increased information protection (IP) risk will increase

Answer: A

Explanation:

A BPR project more often leads to an increased number of people using technology, and this would be a cause for concern. Incorrect answers:

B. As BPR is often technology oriented, and this technology is usually more complex and volatile than in the past, cost savings do not often materialize in this area.

D. There is no reason for IP to conflict with a BPR project, unless the project is not run properly.

NEW QUESTION 4

- (Topic 1)

Which of the following devices extends the network and has the capacity to store frames and act as a storage and forward device?

- A. Router
- B. Bridge
- C. Repeater
- D. Gateway

Answer: B

Explanation:

A bridge connects two separate networks to form a logical network (e.g., joining an ethernet and token network) and has the storage capacity to store frames and act as a storage and forward device. Bridges operate at the OSI data link layer by examining the media access control header of a data packet.

NEW QUESTION 5

- (Topic 1)

Structured programming is BEST described as a technique that:

- A. provides knowledge of program functions to other programmers via peer review
- B. reduces the maintenance time of programs by the use of small-scale program module
- C. makes the readable coding reflect as closely as possible the dynamic execution of the program
- D. controls the coding and testing of the high-level functions of the program in the development process

Answer: B

Explanation:

A characteristic of structured programming is smaller, workable units. Structured programming has evolved because smaller, workable units are easier to maintain. Structured programming is a style of programming which restricts the kinds of control structures. This limitation is not crippling. Any program can be written with allowed control structures. Structured programming is sometimes referred to as go-to-less programming, since a go-to statement is not allowed. This is perhaps the most well known restriction of the style, since go-to statements were common at the time structured programming was becoming more popular. Statement labels also become unnecessary, except in languages where subroutines are identified by labels.

NEW QUESTION 6

- (Topic 1)

Which of the following data validation edits is effective in detecting transposition and transcription errors?

- A. Range check
- B. Check digit
- C. Validity check
- D. Duplicate check

Answer: B

Explanation:

A check digit is a numeric value that is calculated mathematically and is appended to data to ensure that the original data have not been altered or an incorrect, but valid, value substituted. This control is effective in detecting transposition and transcription errors.

NEW QUESTION 7

- (Topic 1)

In an EDI process, the device which transmits and receives electronic documents is the:

- A. communications handle
- B. EDI translat
- C. application interfac
- D. EDI interfac

Answer: A

Explanation:

A communications handler transmits and receives electronic documents between trading partners and/or wide area networks (WANs).

NEW QUESTION 8

- (Topic 1)

Which of the following network configuration options contains a direct link between any two host machines?

- A. Bus
- B. Ring
- C. Star
- D. Completely connected (mesh)

Answer: D

Explanation:

A completely connected mesh configuration creates a direct link between any two host machines.

NEW QUESTION 9

- (Topic 1)

Which of the following tests is an IS auditor performing when a sample of programs is selected to determine if the source and object versions are the same?

- A. A substantive test of program library controls
- B. A compliance test of program library controls
- C. A compliance test of the program compiler controls
- D. A substantive test of the program compiler controls

Answer: B

Explanation:

A compliance test determines if controls are operating as designed and are being applied in a manner that complies with management policies and procedures. For example, if the IS auditor is concerned whether program library controls are working properly, the IS auditor might select a sample of programs to determine if the source and object versions are the same. In other words, the broad objective of any compliance test is to provide auditors with reasonable assurance that a particular control on which the auditor plans to rely is operating as the auditor perceived it in the preliminary evaluation.

NEW QUESTION 10

- (Topic 1)

An IS auditor reviewing the key roles and responsibilities of the database administrator (DBA) is LEAST likely to expect the job description of the DBA to include:

- A. defining the conceptual schem
- B. defining security and integrity check
- C. liaising with users in developing data mode
- D. mapping data model with the internal schem

Answer: D

Explanation:

A DBA only in rare instances should be mapping data elements from the data model to the internal schema (physical data storage definitions). To do so would eliminate data independence for application systems. Mapping of the data model occurs with the conceptual schema since the conceptual schema represents the enterprisewide view of data within an organization and is the basis for deriving an end-user department data model.

NEW QUESTION 10

- (Topic 1)

To affix a digital signature to a message, the sender must first create a message digest by applying a cryptographic hashing algorithm against:

- A. the entire message and thereafter enciphering the message digest using the sender's private ke
- B. any arbitrary part of the message and thereafter enciphering the message digest using the sender's private ke
- C. the entire message and thereafter enciphering the message using the sender's private ke
- D. the entire message and thereafter enciphering the message along with the message digest using the sender's private ke

Answer: A

Explanation:

A digital signature is a cryptographic method that ensures data integrity, authentication of the message, and non-repudiation. To ensure these, the sender first creates a message digest by applying a cryptographic hashing algorithm against the entire message and thereafter enciphers the message digest using the sender's private key. A message digest is created by applying a cryptographic hashing algorithm against the entire message not on any arbitrary part of the message. After creating the message digest, only the message digest is enciphered using the sender's private key, not the message.

NEW QUESTION 12

- (Topic 1)

Which of the following hardware devices relieves the central computer from performing network control, format conversion and message handling tasks?

- A. Spool
- B. Cluster controller
- C. Protocol converter
- D. Front end processor

Answer: D

Explanation:

A front-end processor is a hardware device that connects all communication lines to a central computer to relieve the central computer.

NEW QUESTION 15

- (Topic 1)

The use of a GANTT chart can:

- A. aid in scheduling project task
- B. determine project checkpoint
- C. ensure documentation standard
- D. direct the post-implementation revie

Answer: A

Explanation:

A GANTT chart is used in project control. It may aid in the identification of needed checkpoints but its primary use is in scheduling. It will not ensure the completion of documentation nor will it provide direction for the post-implementation review.

NEW QUESTION 16

- (Topic 1)

A hub is a device that connects:

- A. two LANs using different protocol
- B. a LAN with a WA
- C. a LAN with a metropolitan area network (MAN).
- D. two segments of a single LA

Answer: D

Explanation:

A hub is a device that connects two segments of a single LAN. A hub is a repeater. It provides transparent connectivity to users on all segments of the same LAN. It is a level 1 device.

NEW QUESTION 17

- (Topic 1)

Which of the following systems-based approaches would a financial processing company employ to monitor spending patterns to identify abnormal patterns and report them?

- A. A neural network
- B. Database management software
- C. Management information systems
- D. Computer assisted audit techniques

Answer: A

Explanation:

A neural network will monitor and learn patterns, reporting exceptions for investigation.

NEW QUESTION 19

- (Topic 1)

A hardware control that helps to detect errors when data are communicated from one computer to another is known as a:

- A. duplicate chec
- B. table looku
- C. validity chec
- D. parity chec

Answer: D

Explanation:

A parity check will help to detect data errors when data are read from memory or communicated from one computer to another. A one-bit digit (either 0 or 1) is added to a data item to indicate whether the sum of that data item's bit is odd or even. When the parity bit disagrees with the sum of the other bits, an error report is generated.

NEW QUESTION 22

- (Topic 1)

A malicious code that changes itself with each file it infects is called a:

- A. logic bom
- B. stealth viru
- C. trojan hors
- D. polymorphic viru

Answer: D

Explanation:

A polymorphic virus has the capability of changing its own code, enabling it to have many different variants. Since they have no consistent binary pattern, such viruses are hard to identify.

NEW QUESTION 23

- (Topic 1)

The IS auditor learns that when equipment was brought into the data center by a vendor, the emergency power shutoff switch was accidentally pressed and the UPS was engaged. Which of the following audit recommendations should the IS auditor suggest?

- A. Relocate the shut off switc
- B. Install protective cover
- C. Escort visitor
- D. Log environmental failure

Answer: B

Explanation:

A protective cover over the switch would allow it to be accessible and visible, but would prevent accidental activation.

NEW QUESTION 24

- (Topic 1)

A control that detects transmission errors by appending calculated bits onto the end of each segment of data is known as a:

- A. reasonableness chec
- B. parity chec
- C. redundancy chec
- D. check digit

Answer: C

Explanation:

A redundancy check detects transmission errors by appending calculated bits onto the end of each segment of data.

NEW QUESTION 26

- (Topic 1)

What type of risk results when an IS auditor uses an inadequate test procedure and concludes that material errors do not exist when errors actually exist?

- A. Business risk
- B. Detection risk
- C. Residual risk
- D. Inherent risk

Answer: B

Explanation:

Detection risk results when an IS auditor uses an inadequate test procedure and concludes that material errors do not exist when errors actually exist.

NEW QUESTION 29

- (Topic 1)

What type of approach to the development of organizational policies is often driven by risk assessment?

- A. Bottom-up
- B. Top-down
- C. Comprehensive
- D. Integrated

Answer: B

Explanation:

A bottom-up approach to the development of organizational policies is often driven by risk assessment.

NEW QUESTION 31

- (Topic 1)

What should an IS auditor do if he or she observes that project-approval procedures do not exist?

- A. Advise senior management to invest in project-management training for the staff
- B. Create project-approval procedures for future project implementations
- C. Assign project leaders
- D. Recommend to management that formal approval procedures be adopted and documented

Answer: D

Explanation:

If an IS auditor observes that project-approval procedures do not exist, the IS auditor should recommend to management that formal approval procedures be adopted and documented.

NEW QUESTION 34

- (Topic 1)

Key verification is one of the best controls for ensuring that:

- A. Data is entered correctly
- B. Only authorized cryptographic keys are used
- C. Input is authorized
- D. Database indexing is performed properly

Answer: A

Explanation:

Key verification is one of the best controls for ensuring that data is entered correctly.

NEW QUESTION 38

- (Topic 1)

If senior management is not committed to strategic planning, how likely is it that a company's implementation of IT will be successful?

- A. IT cannot be implemented if senior management is not committed to strategic planning
- B. More likely
- C. Less likely
- D. Strategic planning does not affect the success of a company's implementation of IT

Answer: C

Explanation:

A company's implementation of IT will be less likely to succeed if senior management is not committed to strategic planning.

NEW QUESTION 41

- (Topic 1)

What kind of protocols does the OSI Transport Layer of the TCP/IP protocol suite provide to ensure reliable communication?

- A. Nonconnection-oriented protocols
- B. Connection-oriented protocols
- C. Session-oriented protocols
- D. Nonsession-oriented protocols

Answer: B

Explanation:

The transport layer of the TCP/IP protocol suite provides for connection-oriented protocols to ensure reliable communication.

NEW QUESTION 44

- (Topic 1)

Atomicity enforces data integrity by ensuring that a transaction is either completed in its entirety or not at all. Atomicity is part of the ACID test reference for transaction processing. True or false?

- A. True
- B. False

Answer: A

Explanation:

Atomicity enforces data integrity by ensuring that a transaction is either completed in its entirety or not at all. Atomicity is part of the ACID test reference for transaction processing.

NEW QUESTION 49

- (Topic 1)

Why does the IS auditor often review the system logs?

- A. To get evidence of password spoofing
- B. To get evidence of data copy activities
- C. To determine the existence of unauthorized access to data by a user or program
- D. To get evidence of password sharing

Answer: C

Explanation:

When trying to determine the existence of unauthorized access to data by a user or program, the IS auditor will often review the system logs.

NEW QUESTION 52

- (Topic 1)

What is essential for the IS auditor to obtain a clear understanding of network management?

- A. Security administrator access to systems
- B. Systems logs of all hosts providing application services
- C. A graphical map of the network topology
- D. Administrator access to systems

Answer: C

Explanation:

A graphical interface to the map of the network topology is essential for the IS auditor to obtain a clear understanding of network management.

NEW QUESTION 55

- (Topic 1)

How is risk affected if users have direct access to a database at the system level?

- A. Risk of unauthorized access increases, but risk of untraceable changes to the database decrease
- B. Risk of unauthorized and untraceable changes to the database increase
- C. Risk of unauthorized access decreases, but risk of untraceable changes to the database increase
- D. Risk of unauthorized and untraceable changes to the database decrease

Answer: B

Explanation:

If users have direct access to a database at the system level, risk of unauthorized and untraceable changes to the database increases.

NEW QUESTION 57

- (Topic 1)

What are used as a countermeasure for potential database corruption when two processes attempt to simultaneously edit or update the same information? Choose the BEST answer.

- A. Referential integrity controls
- B. Normalization controls
- C. Concurrency controls
- D. Run-to-run totals

Answer: A

Explanation:

Concurrency controls are used as a countermeasure for potential database corruption when two processes attempt to simultaneously edit or update the same information.

NEW QUESTION 60

- (Topic 1)

What increases encryption overhead and cost the most?

- A. A long symmetric encryption key
- B. A long asymmetric encryption key
- C. A long Advance Encryption Standard (AES) key
- D. A long Data Encryption Standard (DES) key

Answer: B

Explanation:

A long asymmetric encryption key (public key encryption) increases encryption overhead and cost. All other answers are single shared symmetric keys.

NEW QUESTION 65

- (Topic 1)

What is an initial step in creating a proper firewall policy?

- A. Assigning access to users according to the principle of least privilege
- B. Determining appropriate firewall hardware and software
- C. Identifying network applications such as mail, web, or FTP servers
- D. Configuring firewall access rules

Answer: C

Explanation:

Identifying network applications such as mail, web, or FTP servers to be externally accessed is an initial step in creating a proper firewall policy.

NEW QUESTION 66

- (Topic 1)

How does the SSL network protocol provide confidentiality?

- A. Through symmetric encryption such as RSA
- B. Through asymmetric encryption such as Data Encryption Standard, or DES
- C. Through asymmetric encryption such as Advanced Encryption Standard, or AES
- D. Through symmetric encryption such as Data Encryption Standard, or DES

Answer: D

Explanation:

The SSL protocol provides confidentiality through symmetric encryption such as Data Encryption Standard, or DES.

NEW QUESTION 69

- (Topic 1)

What are used as the framework for developing logical access controls?

- A. Information systems security policies
- B. Organizational security policies
- C. Access Control Lists (ACL)
- D. Organizational charts for identifying roles and responsibilities

Answer: A

Explanation:

Information systems security policies are used as the framework for developing logical access controls.

NEW QUESTION 73

- (Topic 1)

Which of the following is a good control for protecting confidential data residing on a PC?

- A. Personal firewall
- B. File encapsulation
- C. File encryption
- D. Host-based intrusion detection

Answer: C

Explanation:

File encryption is a good control for protecting confidential data residing on a PC.

NEW QUESTION 74

- (Topic 1)

What does PKI use to provide some of the strongest overall control over data confidentiality, reliability, and integrity for Internet transactions?

- A. A combination of public-key cryptography and digital certificates and two-factor authentication
- B. A combination of public-key cryptography and two-factor authentication
- C. A combination of public-key cryptography and digital certificates
- D. A combination of digital certificates and two-factor authentication

Answer: C

Explanation:

PKI uses a combination of public-key cryptography and digital certificates to provide some of the strongest overall control over data confidentiality, reliability, and integrity for Internet transactions.

NEW QUESTION 77

- (Topic 1)

Which of the following do digital signatures provide?

- A. Authentication and integrity of data
- B. Authentication and confidentiality of data
- C. Confidentiality and integrity of data
- D. Authentication and availability of data

Answer: A

Explanation:

The primary purpose of digital signatures is to provide authentication and integrity of data.

NEW QUESTION 82

- (Topic 1)

Regarding digital signature implementation, which of the following answers is correct?

- A. A digital signature is created by the sender to prove message integrity by encrypting the message with the sender's private key
- B. Upon receiving the data, the recipient can decrypt the data using the sender's public key
- C. A digital signature is created by the sender to prove message integrity by encrypting the message with the recipient's public key
- D. Upon receiving the data, the recipient can decrypt the data using the recipient's public key
- E. A digital signature is created by the sender to prove message integrity by initially using a hashing algorithm to produce a hash value or message digest from the entire message content
- F. Upon receiving the data, the recipient can independently create its own message digest from the data for comparison and data integrity validation
- G. A digital signature is created by the sender to prove message integrity by encrypting the message with the sender's public key
- H. Upon receiving the data, the recipient can decrypt the data using the recipient's private key

Answer: C

Explanation:

A digital signature is created by the sender to prove message integrity by initially using a hashing algorithm to produce a hash value, or message digest, from the entire message contents. Upon receiving the data, the recipient can independently create its own message digest from the data for comparison and data integrity validation. Public and private keys are used to enforce confidentiality. Hashing algorithms are used to enforce integrity.

NEW QUESTION 87

- (Topic 1)

Which of the following BEST characterizes a mantrap or deadman door, which is used as a deterrent control for the vulnerability of piggybacking?

- A. A monitored double-doorway entry system
- B. A monitored turnstile entry system
- C. A monitored doorway entry system
- D. A one-way door that does not allow exit after entry

Answer: A

Explanation:

A monitored double-doorway entry system, also referred to as a mantrap or deadman door, is used as a deterrent control for the vulnerability of piggybacking.

NEW QUESTION 91

- (Topic 1)

What is an effective countermeasure for the vulnerability of data entry operators potentially leaving their computers without logging off? Choose the BEST answer.

- A. Employee security awareness training
- B. Administrator alerts
- C. Screensaver passwords
- D. Close supervision

Answer: C

Explanation:

Screensaver passwords are an effective control to implement as a countermeasure for the vulnerability of data entry operators potentially leaving their computers without logging off.

NEW QUESTION 95

- (Topic 1)

What can ISPs use to implement inbound traffic filtering as a control to identify IP packets transmitted from unauthorized sources? Choose the BEST answer.

- A. OSI Layer 2 switches with packet filtering enabled
- B. Virtual Private Networks
- C. Access Control Lists (ACL)
- D. Point-to-Point Tunneling Protocol

Answer: C

Explanation:

ISPs can use access control lists to implement inbound traffic filtering as a control to identify IP packets transmitted from unauthorized sources.

NEW QUESTION 100

- (Topic 1)

Which of the following is used to evaluate biometric access controls?

- A. FAR
- B. EER
- C. ERR
- D. FRR

Answer: B

Explanation:

When evaluating biometric access controls, a low equal error rate (EER) is preferred. EER is also called the crossover error rate (CER).

NEW QUESTION 103

- (Topic 1)

Who is ultimately responsible and accountable for reviewing user access to systems?

- A. Systems security administrators
- B. Data custodians
- C. Data owners
- D. Information systems auditors

Answer: C

Explanation:

Data owners are ultimately responsible and accountable for reviewing user access to systems.

NEW QUESTION 106

- (Topic 1)

Establishing data ownership is an important first step for which of the following processes? Choose the BEST answer.

- A. Assigning user access privileges
- B. Developing organizational security policies
- C. Creating roles and responsibilities
- D. Classifying data

Answer: D

Explanation:

To properly implement data classification, establishing data ownership is an important first step.

NEW QUESTION 110

- (Topic 1)

Which of the following is MOST critical during the business impact assessment phase of business continuity planning?

- A. End-user involvement
- B. Senior management involvement
- C. Security administration involvement
- D. IS auditing involvement

Answer: A

Explanation:

End-user involvement is critical during the business impact assessment phase of business continuity planning.

NEW QUESTION 115

- (Topic 1)

What type of BCP test uses actual resources to simulate a system crash and validate the plan's effectiveness?

- A. Paper
- B. Preparedness

- C. Walk-through
- D. Parallel

Answer: B

Explanation:

Of the three major types of BCP tests (paper, walk-through, and preparedness), only the preparedness test uses actual resources to simulate a system crash and validate the plan's effectiveness.

NEW QUESTION 117

- (Topic 1)

Which of the following typically focuses on making alternative processes and resources available for transaction processing?

- A. Cold-site facilities
- B. Disaster recovery for networks
- C. Diverse processing
- D. Disaster recovery for systems

Answer: D

Explanation:

Disaster recovery for systems typically focuses on making alternative processes and resources available for transaction processing.

NEW QUESTION 118

- (Topic 1)

Of the three major types of off-site processing facilities, what type is characterized by at least providing for electricity and HVAC?

- A. Cold site
- B. Alternate site
- C. Hot site
- D. Warm site

Answer: A

Explanation:

Of the three major types of off-site processing facilities (hot, warm, and cold), a cold site is characterized by at least providing for electricity and HVAC. A warm site improves upon this by providing for redundant equipment and software that can be made operational within a short time.

NEW QUESTION 120

- (Topic 1)

With the objective of mitigating the risk and impact of a major business interruption, a disasterrecovery plan should endeavor to reduce the length of recovery time necessary, as well as costs associated with recovery. Although DRP results in an increase of pre-and post-incident operational costs, the extra costs are more than offset by reduced recovery and business impact costs. True or false?

- A. True
- B. False

Answer: A

Explanation:

With the objective of mitigating the risk and impact of a major business interruption, a disaster-recovery plan should endeavor to reduce the length of recovery time necessary and the costs associated with recovery. Although DRP results in an increase of pre-and post-incident operational costs, the extra costs are more than offset by reduced recovery and business impact costs.

NEW QUESTION 124

- (Topic 1)

Of the three major types of off-site processing facilities, what type is often an acceptable solution for preparing for recovery of noncritical systems and data?

- A. Cold site
- B. Hot site
- C. Alternate site
- D. Warm site

Answer: A

Explanation:

A cold site is often an acceptable solution for preparing for recovery of noncritical systems and data.

NEW QUESTION 126

- (Topic 1)

Obtaining user approval of program changes is very effective for controlling application changes and maintenance. True or false?

- A. True
- B. False

Answer: A

Explanation:

Obtaining user approval of program changes is very effective for controlling application changes and maintenance.

NEW QUESTION 130

- (Topic 1)

Library control software restricts source code to:

- A. Read-only access
- B. Write-only access
- C. Full access
- D. Read-write access

Answer: A

Explanation:

Library control software restricts source code to read-only access.

NEW QUESTION 134

- (Topic 1)

When is regression testing used to determine whether new application changes have introduced any errors in the remaining unchanged code?

- A. In program development and change management
- B. In program feasibility studies
- C. In program development
- D. In change management

Answer: A

Explanation:

Regression testing is used in program development and change management to determine whether new changes have introduced any errors in the remaining unchanged code.

NEW QUESTION 136

- (Topic 1)

What is often the most difficult part of initial efforts in application development? Choose the BEST answer.

- A. Configuring software
- B. Planning security
- C. Determining time and resource requirements
- D. Configuring hardware

Answer: C

Explanation:

Determining time and resource requirements for an application-development project is often the most difficult part of initial efforts in application development.

NEW QUESTION 138

- (Topic 1)

What is a primary high-level goal for an auditor who is reviewing a system development project?

- A. To ensure that programming and processing environments are segregated
- B. To ensure that proper approval for the project has been obtained
- C. To ensure that business objectives are achieved
- D. To ensure that projects are monitored and administrated effectively

Answer: C

Explanation:

A primary high-level goal for an auditor who is reviewing a systems-development project is to ensure that business objectives are achieved. This objective guides all other systems development objectives.

NEW QUESTION 140

- (Topic 1)

The quality of the metadata produced from a data warehouse is _____ in the warehouse's design. Choose the BEST answer.

- A. Often hard to determine because the data is derived from a heterogeneous data environment
- B. The most important consideration
- C. Independent of the quality of the warehoused databases
- D. Of secondary importance to data warehouse content

Answer: B

Explanation:

The quality of the metadata produced from a data warehouse is the most important consideration in the warehouse's design.

NEW QUESTION 144

- (Topic 1)

If an IS auditor observes that an IS department fails to use formal documented methodologies, policies, and standards, what should the auditor do? Choose the BEST answer.

- A. Lack of IT documentation is not usually material to the controls tested in an IT audit
- B. The auditor should at least document the informal standards and policies
- C. Furthermore, the IS auditor should create formal documented policies to be implemented
- D. The auditor should at least document the informal standards and policies, and test for compliance
- E. Furthermore, the IS auditor should recommend to management that formal documented policies be developed and implemented
- F. The auditor should at least document the informal standards and policies, and test for compliance
- G. Furthermore, the IS auditor should create formal documented policies to be implemented

Answer: C

Explanation:

If an IS auditor observes that an IS department fails to use formal documented methodologies, policies, and standards, the auditor should at least document the informal standards and policies, and test for compliance. Furthermore, the IS auditor should recommend to management that formal documented policies be developed and implemented.

NEW QUESTION 148

- (Topic 1)

Run-to-run totals can verify data through which stage(s) of application processing?

- A. Initial
- B. Various
- C. Final
- D. Output

Answer: B

Explanation:

Run-to-run totals can verify data through various stages of application processing.

NEW QUESTION 153

- (Topic 1)

What must an IS auditor understand before performing an application audit? Choose the BEST answer.

- A. The potential business impact of application risk
- B. Application risks must first be identified
- C. Relative business processes
- D. Relevant application risk

Answer: C

Explanation:

An IS auditor must first understand relative business processes before performing an application audit.

NEW QUESTION 157

- (Topic 1)

A check digit is an effective edit check to:

- A. Detect data-transcription errors
- B. Detect data-transposition and transcription errors
- C. Detect data-transposition, transcription, and substitution errors
- D. Detect data-transposition errors

Answer: B

Explanation:

A check digit is an effective edit check to detect data-transposition and transcription errors.

NEW QUESTION 158

- (Topic 1)

Parity bits are a control used to validate:

- A. Data authentication
- B. Data completeness
- C. Data source
- D. Data accuracy

Answer: B

Explanation:

Parity bits are a control used to validate data completeness.

NEW QUESTION 161

- (Topic 1)

Which of the following would prevent accountability for an action performed, thus allowing nonrepudiation?

- A. Proper authentication
- B. Proper identification AND authentication
- C. Proper identification
- D. Proper identification, authentication, AND authorization

Answer: B

Explanation:

If proper identification and authentication are not performed during access control, no accountability can exist for any action performed.

NEW QUESTION 163

- (Topic 1)

To properly evaluate the collective effect of preventative, detective, or corrective controls within a process, an IS auditor should be aware of which of the following? Choose the BEST answer.

- A. The business objectives of the organization
- B. The effect of segregation of duties on internal controls
- C. The point at which controls are exercised as data flows through the system
- D. Organizational control policies

Answer: C

Explanation:

When evaluating the collective effect of preventive, detective, or corrective controls within a process, an IS auditor should be aware of the point at which controls are exercised as data flows through the system.

NEW QUESTION 165

- (Topic 1)

What is the recommended initial step for an IS auditor to implement continuous-monitoring systems?

- A. Document existing internal controls
- B. Perform compliance testing on internal controls
- C. Establish a controls-monitoring steering committee
- D. Identify high-risk areas within the organization

Answer: D

Explanation:

When implementing continuous-monitoring systems, an IS auditor's first step is to identify highrisk areas within the organization.

NEW QUESTION 168

- (Topic 1)

What type of risk is associated with authorized program exits (trap doors)? Choose the BEST answer.

- A. Business risk
- B. Audit risk
- C. Detective risk
- D. Inherent risk

Answer: D

Explanation:

Inherent risk is associated with authorized program exits (trap doors).

NEW QUESTION 173

- (Topic 1)

Which of the following is best suited for searching for address field duplications?

- A. Text search forensic utility software
- B. Generalized audit software
- C. Productivity audit software
- D. Manual review

Answer: B

Explanation:

Generalized audit software can be used to search for address field duplications.

NEW QUESTION 178

- (Topic 1)

Which of the following is of greatest concern to the IS auditor?

- A. Failure to report a successful attack on the network
- B. Failure to prevent a successful attack on the network

- C. Failure to recover from a successful attack on the network
- D. Failure to detect a successful attack on the network

Answer: A

Explanation:

Lack of reporting of a successful attack on the network is a great concern to an IS auditor.

NEW QUESTION 181

- (Topic 1)

If an IS auditor finds evidence of risk involved in not implementing proper segregation of duties, such as having the security administrator perform an operations function, what is the auditor's primary responsibility?

- A. To advise senior management
- B. To reassign job functions to eliminate potential fraud
- C. To implement compensating control
- D. Segregation of duties is an administrative control not considered by an IS auditor

Answer: A

Explanation:

An IS auditor's primary responsibility is to advise senior management of the risk involved in not implementing proper segregation of duties, such as having the security administrator perform an operations function.

NEW QUESTION 183

- (Topic 1)

Who is responsible for implementing cost-effective controls in an automated system?

- A. Security policy administrators
- B. Business unit management
- C. Senior management
- D. Board of directors

Answer: B

Explanation:

Business unit management is responsible for implementing cost-effective controls in an automated system.

NEW QUESTION 186

- (Topic 1)

Why does an IS auditor review an organization chart?

- A. To optimize the responsibilities and authority of individuals
- B. To control the responsibilities and authority of individuals
- C. To better understand the responsibilities and authority of individuals
- D. To identify project sponsors

Answer: C

Explanation:

The primary reason an IS auditor reviews an organization chart is to better understand the responsibilities and authority of individuals.

NEW QUESTION 189

- (Topic 1)

Ensuring that security and control policies support business and IT objectives is a primary objective of:

- A. An IT security policies audit
- B. A processing audit
- C. A software audit
- D. A vulnerability assessment

Answer: A

Explanation:

Ensuring that security and control policies support business and IT objectives is a primary objective of an IT security policies audit.

NEW QUESTION 191

- (Topic 1)

When performing an IS strategy audit, an IS auditor should review both short-term (one-year) and long-term (three-to five-year) IS strategies, interview appropriate corporate management personnel, and ensure that the external environment has been considered. The auditor should especially focus on procedures in an audit of IS strategy. True or false?

- A. True
- B. False

Answer: B

Explanation:

When performing an IS strategy audit, an IS auditor should review both short-term (one-year) and long-term (three-to five-year) IS strategies, interview appropriate corporate management personnel, and ensure that the external environment has been considered.

NEW QUESTION 194

- (Topic 1)

What process allows IS management to determine whether the activities of the organization differ from the planned or expected levels? Choose the BEST answer.

- A. Business impact assessment
- B. Risk assessment
- C. IS assessment methods
- D. Key performance indicators (KPIs)

Answer: C

Explanation:

IS assessment methods allow IS management to determine whether the activities of the organization differ from the planned or expected levels.

NEW QUESTION 199

- (Topic 1)

When should reviewing an audit client's business plan be performed relative to reviewing an organization's IT strategic plan?

- A. Reviewing an audit client's business plan should be performed before reviewing an organization's IT strategic plan
- B. Reviewing an audit client's business plan should be performed after reviewing an organization's IT strategic plan
- C. Reviewing an audit client's business plan should be performed during the review of an organization's IT strategic plan
- D. Reviewing an audit client's business plan should be performed without regard to an organization's IT strategic plan

Answer: A

Explanation:

Reviewing an audit client's business plan should be performed before reviewing an organization's IT strategic plan.

NEW QUESTION 204

- (Topic 1)

Proper segregation of duties does not prohibit a quality control administrator from also being responsible for change control and problem management. True or false?

- A. True
- B. False

Answer: A

Explanation:

Proper segregation of duties does not prohibit a quality-control administrator from also being responsible for change control and problem management.

NEW QUESTION 207

- (Topic 1)

What can be implemented to provide the highest level of protection from external attack?

- A. Layering perimeter network protection by configuring the firewall as a screened host in a screened subnet behind the bastion host
- B. Configuring the firewall as a screened host behind a router
- C. Configuring the firewall as the protecting bastion host
- D. Configuring two load-sharing firewalls facilitating VPN access from external hosts to internal hosts

Answer: A

Explanation:

Layering perimeter network protection by configuring the firewall as a screened host in a screened subnet behind the bastion host provides a higher level of protection from external attack than all other answers.

NEW QUESTION 210

- (Topic 1)

The directory system of a database-management system describes:

- A. The access method to the data
- B. The location of data AND the access method
- C. The location of data
- D. Neither the location of data NOR the access method

Answer: B

Explanation:

The directory system of a database-management system describes the location of data and the access method.

NEW QUESTION 212

- (Topic 1)

In order to properly protect against unauthorized disclosure of sensitive data, how should hard disks be sanitized?

- A. The data should be deleted and overwritten with binary 0
- B. The data should be demagnetize
- C. The data should be low-level formatte
- D. The data should be delete

Answer: B

Explanation:

To properly protect against unauthorized disclosure of sensitive data, hard disks should be demagnetized before disposal or release.

NEW QUESTION 217

- (Topic 1)

When reviewing print systems spooling, an IS auditor is MOST concerned with which of the following vulnerabilities?

- A. The potential for unauthorized deletion of report copies
- B. The potential for unauthorized modification of report copies
- C. The potential for unauthorized printing of report copies
- D. The potential for unauthorized editing of report copies

Answer: C

Explanation:

When reviewing print systems spooling, an IS auditor is most concerned with the potential for unauthorized printing of report copies.

NEW QUESTION 222

- (Topic 1)

Why is the WAP gateway a component warranting critical concern and review for the IS auditor when auditing and testing controls enforcing message confidentiality?

- A. WAP is often configured by default settings and is thus insecure
- B. WAP provides weak encryption for wireless traffic
- C. WAP functions as a protocol-conversion gateway for wireless TLS to Internet SSL
- D. WAP often interfaces critical IT system

Answer: C

Explanation:

Functioning as a protocol-conversion gateway for wireless TLS to Internet SSL, the WAP gateway is a component warranting critical concern and review for the IS auditor when auditing and testing controls that enforce message confidentiality.

NEW QUESTION 223

- (Topic 1)

How do modems (modulation/demodulation) function to facilitate analog transmissions to enter a digital network?

- A. Modems convert analog transmissions to digital, and digital transmission to analog
- B. Modems encapsulate analog transmissions within digital, and digital transmissions within analog
- C. Modems convert digital transmissions to analog, and analog transmissions to digital
- D. Modems encapsulate digital transmissions within analog, and analog transmissions within digital

Answer: A

Explanation:

Modems (modulation/demodulation) convert analog transmissions to digital, and digital transmissions to analog, and are required for analog transmissions to enter a digital network.

NEW QUESTION 226

- (Topic 1)

What supports data transmission through split cable facilities or duplicate cable facilities?

- A. Diverse routing
- B. Dual routing
- C. Alternate routing
- D. Redundant routing

Answer: A

Explanation:

Diverse routing supports data transmission through split cable facilities, or duplicate cable facilities.

NEW QUESTION 227

- (Topic 1)

What type(s) of firewalls provide(s) the greatest degree of protection and control because both firewall technologies inspect all seven OSI layers of network traffic?

- A. A first-generation packet-filtering firewall
- B. A circuit-level gateway

- C. An application-layer gateway, or proxy firewall, and stateful-inspection firewalls
- D. An application-layer gateway, or proxy firewall, but not stateful-inspection firewalls

Answer: C

Explanation:

An application-layer gateway, or proxy firewall, and stateful-inspection firewalls provide the greatest degree of protection and control because both firewall technologies inspect all seven OSI layers of network traffic.

NEW QUESTION 229

- (Topic 1)

Which of the following can degrade network performance? Choose the BEST answer.

- A. Superfluous use of redundant load-sharing gateways
- B. Increasing traffic collisions due to host congestion by creating new collision domains
- C. Inefficient and superfluous use of network devices such as switches
- D. Inefficient and superfluous use of network devices such as hubs

Answer: D

Explanation:

Inefficient and superfluous use of network devices such as hubs can degrade network performance.

NEW QUESTION 233

- (Topic 1)

Which of the following provide(s) near-immediate recoverability for time-sensitive systems and transaction processing?

- A. Automated electronic journaling and parallel processing
- B. Data mirroring and parallel processing
- C. Data mirroring
- D. Parallel processing

Answer: B

Explanation:

Data mirroring and parallel processing are both used to provide near-immediate recoverability for time-sensitive systems and transaction processing.

NEW QUESTION 237

- (Topic 1)

Which of the following help(s) prevent an organization's systems from participating in a distributed denial-of-service (DDoS) attack? Choose the BEST answer.

- A. Inbound traffic filtering
- B. Using access control lists (ACLs) to restrict inbound connection attempts
- C. Outbound traffic filtering
- D. Recentralizing distributed systems

Answer: C

Explanation:

Outbound traffic filtering can help prevent an organization's systems from participating in a distributed denial-of-service (DDoS) attack.

NEW QUESTION 241

- (Topic 1)

What is a common vulnerability, allowing denial-of-service attacks?

- A. Assigning access to users according to the principle of least privilege
- B. Lack of employee awareness of organizational security policies
- C. Improperly configured routers and router access lists
- D. Configuring firewall access rules

Answer: C

Explanation:

Improperly configured routers and router access lists are a common vulnerability for denial-of-service attacks.

NEW QUESTION 244

- (Topic 1)

What is/are used to measure and ensure proper network capacity management and availability of services? Choose the BEST answer.

- A. Network performance-monitoring tools
- B. Network component redundancy
- C. Syslog reporting
- D. IT strategic planning

Answer: A

Explanation:

Network performance-monitoring tools are used to measure and ensure proper network capacity management and availability of services.

NEW QUESTION 245

- (Topic 1)

What can be used to gather evidence of network attacks?

- A. Access control lists (ACL)
- B. Intrusion-detection systems (IDS)
- C. Syslog reporting
- D. Antivirus programs

Answer: B

Explanation:

Intrusion-detection systems (IDS) are used to gather evidence of network attacks.

NEW QUESTION 247

- (Topic 1)

Which of the following is a passive attack method used by intruders to determine potential network vulnerabilities?

- A. Traffic analysis
- B. SYN flood
- C. Denial of service (DoS)
- D. Distributed denial of service (DoS)

Answer: A

Explanation:

Traffic analysis is a passive attack method used by intruders to determine potential network vulnerabilities. All others are active attacks.

NEW QUESTION 249

- (Topic 1)

What is a callback system?

- A. It is a remote-access system whereby the remote-access server immediately calls the user back at a predetermined number if the dial-in connection fail
- B. It is a remote-access system whereby the user's application automatically redials the remoteaccess server if the initial connection attempt fail
- C. It is a remote-access control whereby the user initially connects to the network systems via dial-up access, only to have the initial connection terminated by the server, which then subsequently dials the user back at a predetermined number stored in the server's configuration databas
- D. It is a remote-access control whereby the user initially connects to the network systems via dial-up access, only to have the initial connection terminated by the server, which then subsequently allows the user to call back at an approved number for a limited period of tim

Answer: C

Explanation:

A callback system is a remote-access control whereby the user initially connects to the network systems via dial-up access, only to have the initial connection terminated by the server, which then subsequently dials the user back at a predetermined number stored in the server's configuration database.

NEW QUESTION 250

- (Topic 1)

What type of fire-suppression system suppresses fire via water that is released from a main valve to be delivered via a system of dry pipes installed throughout the facilities?

- A. A dry-pipe sprinkler system
- B. A deluge sprinkler system
- C. A wet-pipe system
- D. A halon sprinkler system

Answer: A

Explanation:

A dry-pipe sprinkler system suppresses fire via water that is released from a main valve to be delivered via a system of dry pipes installed throughout the facilities.

NEW QUESTION 254

- (Topic 1)

Which of the following provides the BEST single-factor authentication?

- A. Biometrics
- B. Password
- C. Token
- D. PIN

Answer: A

Explanation:

Although biometrics provides only single-factor authentication, many consider it to be an excellent method for user authentication.

NEW QUESTION 256

- (Topic 1)

What is used to provide authentication of the website and can also be used to successfully authenticate keys used for data encryption?

- A. An organizational certificate
- B. A user certificate
- C. A website certificate
- D. Authenticode

Answer: C

Explanation:

A website certificate is used to provide authentication of the website and can also be used to successfully authenticate keys used for data encryption.

NEW QUESTION 261

- (Topic 1)

Which of the following should an IS auditor review to determine user permissions that have been granted for a particular resource? Choose the BEST answer.

- A. Systems logs
- B. Access control lists (ACL)
- C. Application logs
- D. Error logs

Answer: B

Explanation:

IS auditors should review access-control lists (ACL) to determine user permissions that have been granted for a particular resource.

NEW QUESTION 264

- (Topic 1)

What should IS auditors always check when auditing password files?

- A. That deleting password files is protected
- B. That password files are encrypted
- C. That password files are not accessible over the network
- D. That password files are archived

Answer: B

Explanation:

IS auditors should always check to ensure that password files are encrypted.

NEW QUESTION 267

- (Topic 1)

Using the OSI reference model, what layer(s) is/are used to encrypt data?

- A. Transport layer
- B. Session layer
- C. Session and transport layers
- D. Data link layer

Answer: C

Explanation:

User applications often encrypt and encapsulate data using protocols within the OSI session layer or farther down in the transport layer.

NEW QUESTION 270

- (Topic 1)

When should systems administrators first assess the impact of applications or systems patches?

- A. Within five business days following installation
- B. Prior to installation
- C. No sooner than five business days following installation
- D. Immediately following installation

Answer: B

Explanation:

Systems administrators should always assess the impact of patches before installation.

NEW QUESTION 272

- (Topic 1)

Which of the following is of greatest concern when performing an IS audit?

- A. Users' ability to directly modify the database
- B. Users' ability to submit queries to the database
- C. Users' ability to indirectly modify the database

D. Users' ability to directly view the database

Answer: A

Explanation:

A major IS audit concern is users' ability to directly modify the database.

NEW QUESTION 273

- (Topic 1)

What are intrusion-detection systems (IDS) primarily used for?

- A. To identify AND prevent intrusion attempts to a network
- B. To prevent intrusion attempts to a network
- C. Forensic incident response
- D. To identify intrusion attempts to a network

Answer: D

Explanation:

Intrusion-detection systems (IDS) are used to identify intrusion attempts on a network.

NEW QUESTION 278

- (Topic 1)

Rather than simply reviewing the adequacy of access control, appropriateness of access policies, and effectiveness of safeguards and procedures, the IS auditor is more concerned with effectiveness and utilization of assets. True or false?

- A. True
- B. False

Answer: B

Explanation:

Instead of simply reviewing the effectiveness and utilization of assets, an IS auditor is more concerned with adequate access control, appropriate access policies, and effectiveness of safeguards and procedures.

NEW QUESTION 281

- (Topic 1)

An off-site processing facility should be easily identifiable externally because easy identification helps ensure smoother recovery. True or false?

- A. True
- B. False

Answer: B

Explanation:

An off-site processing facility should not be easily identifiable externally because easy identification would create an additional vulnerability for sabotage.

NEW QUESTION 284

- (Topic 1)

Which of the following is the dominating objective of BCP and DRP?

- A. To protect human life
- B. To mitigate the risk and impact of a business interruption
- C. To eliminate the risk and impact of a business interruption
- D. To transfer the risk and impact of a business interruption

Answer: A

Explanation:

Although the primary business objective of BCP and DRP is to mitigate the risk and impact of a business interruption, the dominating objective remains the protection of human life.

NEW QUESTION 287

- (Topic 1)

Off-site data storage should be kept synchronized when preparing for recovery of time-sensitive data such as that resulting from which of the following? Choose the BEST answer.

- A. Financial reporting
- B. Sales reporting
- C. Inventory reporting
- D. Transaction processing

Answer: D

Explanation:

Off-site data storage should be kept synchronized when preparing for the recovery of timesensitive data such as that resulting from transaction processing.

NEW QUESTION 291

- (Topic 1)

Off-site data backup and storage should be geographically separated so as to _____ (fill in the blank) the risk of a widespread physical disaster such as a hurricane or earthquake.

- A. Accept
- B. Eliminate
- C. Transfer
- D. Mitigate

Answer: D

Explanation:

Off-site data backup and storage should be geographically separated, to mitigate the risk of a widespread physical disaster such as a hurricane or an earthquake.

NEW QUESTION 296

- (Topic 1)

Why is a clause for requiring source code escrow in an application vendor agreement important?

- A. To segregate systems development and live environments
- B. To protect the organization from copyright disputes
- C. To ensure that sufficient code is available when needed
- D. To ensure that the source code remains available even if the application vendor goes out of business

Answer: D

Explanation:

A clause for requiring source code escrow in an application vendor agreement is important to ensure that the source code remains available even if the application vendor goes out of business.

NEW QUESTION 300

- (Topic 1)

What protects an application purchaser's ability to fix or change an application in case the application vendor goes out of business?

- A. Assigning copyright to the organization
- B. Program back doors
- C. Source code escrow
- D. Internal programming expertise

Answer: C

Explanation:

Source code escrow protects an application purchaser's ability to fix or change an application in case the application vendor goes out of business.

NEW QUESTION 302

- (Topic 1)

An IS auditor should carefully review the functional requirements in a systems-development project to ensure that the project is designed to:

- A. Meet business objectives
- B. Enforce data security
- C. Be culturally feasible
- D. Be financially feasible

Answer: A

Explanation:

An IS auditor should carefully review the functional requirements in a systems-development project to ensure that the project is designed to meet business objectives.

NEW QUESTION 305

- (Topic 1)

Which of the following processes are performed during the design phase of the systemsdevelopment life cycle (SDLC) model?

- A. Develop test plan
- B. Baseline procedures to prevent scope cree
- C. Define the need that requires resolution, and map to the major requirements of the solutio
- D. Program and test the new syste
- E. The tests verify and validate what has been develope

Answer: B

Explanation:

Procedures to prevent scope creep are baselined in the design phase of the systems-development life cycle (SDLC) model.

NEW QUESTION 308

- (Topic 1)

What is used to develop strategically important systems faster, reduce development costs, and still maintain high quality? Choose the BEST answer.

- A. Rapid application development (RAD)
- B. GANTT
- C. PERT
- D. Decision trees

Answer: A

Explanation:

Rapid application development (RAD) is used to develop strategically important systems faster, reduce development costs, and still maintain high quality.

NEW QUESTION 313

- (Topic 1)

Test and development environments should be separated. True or false?

- A. True
- B. False

Answer: A

Explanation:

Test and development environments should be separated, to control the stability of the test environment.

NEW QUESTION 318

- (Topic 1)

What kind of testing should programmers perform following any changes to an application or system?

- A. Unit, module, and full regression testing
- B. Module testing
- C. Unit testing
- D. Regression testing

Answer: A

Explanation:

Programmers should perform unit, module, and full regression testing following any changes to an application or system.

NEW QUESTION 320

- (Topic 1)

Which of the following uses a prototype that can be updated continually to meet changing user or business requirements?

- A. PERT
- B. Rapid application development (RAD)
- C. Function point analysis (FPA)
- D. GANTT

Answer: B

Explanation:

Rapid application development (RAD) uses a prototype that can be updated continually to meet changing user or business requirements.

NEW QUESTION 321

- (Topic 1)

Who is responsible for the overall direction, costs, and timetables for systems-development projects?

- A. The project sponsor
- B. The project steering committee
- C. Senior management
- D. The project team leader

Answer: B

Explanation:

The project steering committee is responsible for the overall direction, costs, and timetables for systems-development projects.

NEW QUESTION 324

- (Topic 1)

When should plans for testing for user acceptance be prepared? Choose the BEST answer.

- A. In the requirements definition phase of the systems-development project
- B. In the feasibility phase of the systems-development project
- C. In the design phase of the systems-development project
- D. In the development phase of the systems-development project

Answer: A

Explanation:

Plans for testing for user acceptance are usually prepared in the requirements definition phase of the systems-development project.

NEW QUESTION 329

- (Topic 1)

Authentication techniques for sending and receiving data between EDI systems is crucial to prevent which of the following? Choose the BEST answer.

- A. Unsynchronized transactions
- B. Unauthorized transactions
- C. Inaccurate transactions
- D. Incomplete transactions

Answer: B

Explanation:

Authentication techniques for sending and receiving data between EDI systems are crucial to prevent unauthorized transactions.

NEW QUESTION 330

- (Topic 1)

What is the primary security concern for EDI environments? Choose the BEST answer.

- A. Transaction authentication
- B. Transaction completeness
- C. Transaction accuracy
- D. Transaction authorization

Answer: D

Explanation:

Transaction authorization is the primary security concern for EDI environments.

NEW QUESTION 331

- (Topic 1)

Whenever business processes have been re-engineered, the IS auditor attempts to identify and quantify the impact of any controls that might have been removed, or controls that might not work as effectively after business process changes. True or false?

- A. True
- B. False

Answer: A

Explanation:

Whenever business processes have been re-engineered, the IS auditor should attempt to identify and quantify the impact of any controls that might have been removed, or controls that might not work as effectively after business process changes.

NEW QUESTION 334

- (Topic 1)

_____ (fill in the blank) should be implemented as early as data preparation to support data integrity at the earliest point possible.

- A. Control totals
- B. Authentication controls
- C. Parity bits
- D. Authorization controls

Answer: A

Explanation:

Control totals should be implemented as early as data preparation to support data integrity at the earliest point possible.

NEW QUESTION 337

- (Topic 1)

What is a data validation edit control that matches input data to an occurrence rate? Choose the BEST answer.

- A. Accuracy check
- B. Completeness check
- C. Reasonableness check
- D. Redundancy check

Answer: C

Explanation:

A reasonableness check is a data validation edit control that matches input data to an occurrence rate.

NEW QUESTION 339

- (Topic 1)

An IS auditor is using a statistical sample to inventory the tape library. What type of test would this be considered?

- A. Substantive
- B. Compliance
- C. Integrated
- D. Continuous audit

Answer: A

Explanation:

Using a statistical sample to inventory the tape library is an example of a substantive test.

NEW QUESTION 341

- (Topic 2)

An IS auditor is reviewing access to an application to determine whether the 10 most recent "new user" forms were correctly authorized. This is an example of:

- A. variable samplin
- B. substantive testin
- C. compliance testin
- D. stop-or-go samplin

Answer: C

Explanation:

Compliance testing determines whether controls are being applied in compliance with policy. This includes tests to determine whether new accounts were appropriately authorized. Variable sampling is used to estimate numerical values, such as dollar values. Substantive testing substantiates the integrity of actual processing, such as balances on financial statements. The development of substantive tests is often dependent on the outcome of compliance tests. If compliance tests indicate that there are adequate internal controls, then substantive tests can be minimized. Stop-or-go sampling allows a test to be stopped as early as possible and is not appropriate for checking whether procedures have been followed.

NEW QUESTION 344

- (Topic 2)

The decisions and actions of an IS auditor are MOST likely to affect which of the following risks?

- A. Inherent
- B. Detection
- C. Control
- D. Business

Answer: B

Explanation:

Detection risks are directly affected by the auditor's selection of audit procedures and techniques. Inherent risks are not usually affected by an IS auditor. Control risks are controlled by the actions of the company's management. Business risks are not affected by an IS auditor.

NEW QUESTION 349

- (Topic 2)

An audit charter should:

- A. be dynamic and change often to coincide with the changing nature of technology and the audit professio
- B. clearly state audit objectives for, and the delegation of, authority to the maintenance and review of internal control
- C. document the audit procedures designed to achieve the planned audit objective
- D. outline the overall authority, scope and responsibilities of the audit functio

Answer: D

Explanation:

An audit charter should state management's objectives for and delegation of authority to IS audit. This charter should not significantly change over time and should be approved at the highest level of management. An audit charter would not be at a detailed level and, therefore, would not include specific audit objectives or procedures.

NEW QUESTION 352

- (Topic 2)

Which of the following is the MOST likely reason why e-mail systems have become a useful source of evidence for litigation?

- A. Multiple cycles of backup files remain availabl
- B. Access controls establish accountability for e-mail activit
- C. Data classification regulates what information should be communicated via e-mai
- D. Within the enterprise, a clear policy for using e-mail ensures that evidence is availabl

Answer: A

Explanation:

Backup files containing documents that supposedly have been deleted could be recovered from these files. Access controls may help establish accountability for the issuance of a particular document, but this does not provide evidence of the e-mail. Data classification standards may be in place with regards to what should be communicated via e-mail, but the creation of the policy does not provide the information required for litigation purposes.

NEW QUESTION 356

- (Topic 2)

The PRIMARY advantage of a continuous audit approach is that it:

- A. does not require an IS auditor to collect evidence on system reliability while processing is taking place
- B. requires the IS auditor to review and follow up immediately on all information collected
- C. can improve system security when used in time-sharing environments that process a large number of transactions
- D. does not depend on the complexity of an organization's computer system

Answer: C

Explanation:

The use of continuous auditing techniques can improve system security when used in time-sharing environments that process a large number of transactions, but leave a scarce paper trail. Choice A is incorrect since the continuous audit approach often does require an IS auditor to collect evidence on system reliability while processing is taking place. Choice B is incorrect since an IS auditor normally would review and follow up only on material deficiencies or errors detected. Choice D is incorrect since the use of continuous audit techniques depends on the complexity of an organization's computer systems.

NEW QUESTION 357

- (Topic 2)

The PRIMARY purpose of audit trails is to:

- A. improve response time for user
- B. establish accountability and responsibility for processed transactions
- C. improve the operational efficiency of the system
- D. provide useful information to auditors who may wish to track transactions

Answer: B

Explanation:

Enabling audit trails helps in establishing the accountability and responsibility of processed transactions by tracing transactions through the system. The objective of enabling software to provide audit trails is not to improve system efficiency, since it often involves additional processing which may in fact reduce response time for users. Enabling audit trails involves storage and thus occupies disk space. Choice D is also a valid reason; however, it is not the primary reason.

NEW QUESTION 362

- (Topic 2)

To ensure that audit resources deliver the best value to the organization, the FIRST step would be to:

- A. schedule the audits and monitor the time spent on each audit
- B. train the IS audit staff on current technology used in the company
- C. develop the audit plan on the basis of a detailed risk assessment
- D. monitor progress of audits and initiate cost control measures

Answer: C

Explanation:

Monitoring the time (choice A) and audit programs (choice D), as well as adequate training (choice B), will improve the IS audit staff's productivity (efficiency and performance), but that which delivers value to the organization are the resources and efforts being dedicated to, and focused on, the higher-risk areas.

NEW QUESTION 367

- (Topic 2)

An IS auditor is evaluating management's risk assessment of information systems. The IS auditor should FIRST review:

- A. the controls already in place
- B. the effectiveness of the controls in place
- C. the mechanism for monitoring the risks related to the asset
- D. the threats/vulnerabilities affecting the asset

Answer: D

Explanation:

One of the key factors to be considered while assessing the risks related to the use of various information systems is the threats and vulnerabilities affecting the assets. The risks related to the use of information assets should be evaluated in isolation from the installed controls. Similarly, the effectiveness of the controls should be considered during the risk mitigation stage and not during the risk assessment phase. A mechanism to continuously monitor the risks related to assets should be put in place during the risk monitoring function that follows the risk assessment phase.

NEW QUESTION 370

- (Topic 2)

While planning an audit, an assessment of risk should be made to provide:

- A. reasonable assurance that the audit will cover material items
- B. definite assurance that material items will be covered during the audit work
- C. reasonable assurance that all items will be covered by the audit
- D. sufficient assurance that all items will be covered during the audit work

Answer: A

Explanation:

The ISACA IS Auditing Guideline G15 on planning the IS audit states, 'An assessment of risk should be made to provide reasonable assurance that material items will be adequately covered during the audit work. This assessment should identify areas with a relatively high risk of the existence of material problems.' Definite assurance that material items will be covered during the audit work is an impractical proposition. Reasonable assurance that all items will be covered during the audit work is not the correct answer, as material items need to be covered, not all items.

NEW QUESTION 371

- (Topic 2)

The PRIMARY purpose of an IT forensic audit is:

- A. to participate in investigations related to corporate fraud
- B. the systematic collection of evidence after a system irregularity
- C. to assess the correctness of an organization's financial statements
- D. to determine that there has been criminal activity

Answer: B

Explanation:

Choice B describes a forensic audit. The evidence collected could then be used in judicial proceedings. Forensic audits are not limited to corporate fraud. Assessing the correctness of an organization's financial statements is not the purpose of a forensic audit. Drawing a conclusion as to criminal activity would be part of a legal process and not the objective of a forensic audit.

NEW QUESTION 374

- (Topic 2)

An IS auditor is evaluating a corporate network for a possible penetration by employees. Which of the following findings should give the IS auditor the GREATEST concern?

- A. There are a number of external modems connected to the network
- B. Users can install software on their desktop
- C. Network monitoring is very limited
- D. Many user IDs have identical passwords

Answer: D

Explanation:

Exploitation of a known user ID and password requires minimal technical knowledge and exposes the network resources to exploitation. The technical barrier is low and the impact can be very high; therefore, the fact that many user IDs have identical passwords represents the greatest threat. External modems represent a security risk, but exploitation still depends on the use of a valid user account. While the impact of users installing software on their desktops can be high (for example, due to the installation of Trojans or key-logging programs), the likelihood is not high due to the level of technical knowledge required to successfully penetrate the network. Although network monitoring can be a useful detective control, it will only detect abuse of user accounts in special circumstances and is, therefore, not a first line of defense.

NEW QUESTION 378

- (Topic 2)

Which of the following is the PRIMARY advantage of using computer forensic software for investigations?

- A. The preservation of the chain of custody for electronic evidence
- B. Time and cost savings
- C. Efficiency and effectiveness
- D. Ability to search for violations of intellectual property rights

Answer: A

Explanation:

The primary objective of forensic software is to preserve electronic evidence to meet the rules of evidence. Choice B, time and cost savings, and choice C, efficiency and effectiveness, are legitimate concerns that differentiate good from poor forensic software packages. Choice D, the ability to search for intellectual property rights violations, is an example of a use of forensic software.

NEW QUESTION 379

CORRECT TEXT - (Topic 2)

The vice president of human resources has requested an audit to identify payroll overpayments for the previous year. Which would be the BEST audit technique to use in this situation?

- A. Test data
- B. Generalized audit software
- C. Integrated test facility
- D. Embedded audit module

Answer: B

NEW QUESTION 381

- (Topic 2)

During a security audit of IT processes, an IS auditor found that there were no documented security procedures. The IS auditor should:

- A. create the procedures document
- B. terminate the audit
- C. conduct compliance testing
- D. identify and evaluate existing practice

Answer: D

Explanation:

One of the main objectives of an audit is to identify potential risks; therefore, the most proactive approach would be to identify and evaluate the existing security practices being followed by the organization. IS auditors should not prepare documentation, as doing so could jeopardize their independence. Terminating the audit may prevent achieving one of the basic audit objectives, i.e., identification of potential risks. Since there are no documented procedures, there is no basis against which to test compliance.

NEW QUESTION 386

- (Topic 2)

Which of the following would normally be the MOST reliable evidence for an auditor?

- A. A confirmation letter received from a third party verifying an account balance
- B. Assurance from line management that an application is working as designed
- C. Trend data obtained from World Wide Web (Internet) sources
- D. Ratio analysts developed by the IS auditor from reports supplied by line management

Answer: A

Explanation:

Evidence obtained from independent third parties almost always is considered to be the most reliable. Choices B, C and D would not be considered as reliable.

NEW QUESTION 387

- (Topic 2)

When evaluating the collective effect of preventive, detective or corrective controls within a process, an IS auditor should be aware of which of the following?

- A. The point at which controls are exercised as data flow through the system
- B. Only preventive and detective controls are relevant
- C. Corrective controls can only be regarded as compensating
- D. Classification allows an IS auditor to determine which controls are missing

Answer: A

Explanation:

An IS auditor should focus on when controls are exercised as data flow through a computer system. Choice B is incorrect since corrective controls may also be relevant. Choice C is incorrect, since corrective controls remove or reduce the effects of errors or irregularities and are exclusively regarded as compensating controls. Choice D is incorrect and irrelevant since the existence and function of controls is important, not the classification.

NEW QUESTION 388

- (Topic 2)

Which audit technique provides the BEST evidence of the segregation of duties in an IS department?

- A. Discussion with management
- B. Review of the organization chart
- C. Observation and interviews
- D. Testing of user access rights

Answer: C

Explanation:

By observing the IS staff performing their tasks, an IS auditor can identify whether they are performing any incompatible operations, and by interviewing the IS staff, the auditor can get an overview of the tasks performed. Based on the observations and interviews the auditor can evaluate the segregation of duties. Management may not be aware of the detailed functions of each employee in the IS department; therefore, discussion with the management would provide only limited information regarding segregation of duties. An organization chart would not provide details of the functions of the employees. Testing of user rights would provide information about the rights they have within the IS systems, but would not provide complete information about the functions they perform.

NEW QUESTION 390

- (Topic 2)

During a review of a customer master file, an IS auditor discovered numerous customer name duplications arising from variations in customer first names. To determine the extent of the duplication, the IS auditor would use:

- A. test data to validate data input
- B. test data to determine system sort capabilities
- C. generalized audit software to search for address field duplication
- D. generalized audit software to search for account field duplication

Answer: C

Explanation:

Since the name is not the same {due to name variations}, one method to detect duplications would be to compare other common fields, such as addresses. A subsequent review to determine common customer names at these addresses could then be conducted. Searching for duplicate account numbers would not likely find duplications, since customers would most likely have different account numbers for each variation. Test data would not be useful to detect the extent of any data characteristic, but simply to determine how the data were processed.

NEW QUESTION 393

- (Topic 2)

Which of the following would be the BEST population to take a sample from when testing program changes?

- A. Test library listings
- B. Source program listings
- C. Program change requests
- D. Production library listings

Answer: D

Explanation:

The best source from which to draw any sample or test of system information is the automated system. The production libraries represent executables that are approved and authorized to process organizational data. Source program listings would be timeintensive. Program change requests are the documents used to initiate change; there is no guarantee that the request has been completed for all changes. Test library listings do not represent the approved and authorized executables.

NEW QUESTION 394

- (Topic 2)

Data flow diagrams are used by IS auditors to:

- A. order data hierarchicall
- B. highlight high-level data definition
- C. graphically summarize data paths and storag
- D. portray step-by-step details of data generatio

Answer: C

Explanation:

Data flow diagrams are used as aids to graph or chart data flow and storage. They trace the data from its origination to destination, highlighting the paths and storage of data. They do not order data in any hierarchy. The flow of the data will not necessarily match any hierarchy or data generation order.

NEW QUESTION 397

- (Topic 2)

Which of the following forms of evidence for the auditor would be considered the MOST reliable?

- A. An oral statement from the auditee
- B. The results of a test performed by an IS auditor
- C. An internally generated computer accounting report
- D. A confirmation letter received from an outside source

Answer: D

Explanation:

Evidence obtained from outside sources is usually more reliable than that obtained from within the organization. Confirmation letters received from outside parties, such as those used to verify accounts receivable balances, are usually highly reliable. Testing performed by an auditor may not be reliable, if the auditor did not have a good understanding of the technical area under review.

NEW QUESTION 402

- (Topic 2)

An IS auditor reviews an organizational chart PRIMARILY for:

- A. an understanding of workflow
- B. investigating various communication channel
- C. understanding the responsibilities and authority of individual
- D. investigating the network connected to different employee

Answer: C

Explanation:

An organizational chart provides information about the responsibilities and authority of individuals in the organization. This helps an IS auditor to know if there is a proper segregation of functions. A workflow chart would provide information about the roles of different employees. A network diagram will provide information about the usage of various communication channels and will indicate the connection of users to the network.

NEW QUESTION 406

- (Topic 2)

An IS auditor attempting to determine whether access to program documentation is restricted to authorized persons would MOST likely:

- A. evaluate the record retention plans for off-premises storag
- B. interview programmers about the procedures currently being followe
- C. compare utilization records to operations schedule
- D. review data file access records to test the librarian functio

Answer: B

Explanation:

Asking programmers about the procedures currently being followed is useful in determining whether access to program documentation is restricted to authorized persons. Evaluating the record retention plans for off-premises storage tests the recovery procedures, not the access control over program documentation. Testing utilization records or data files will not address access security over program documentation.

NEW QUESTION 411

- (Topic 2)

An IS auditor performing a review of an application's controls would evaluate the:

- A. efficiency of the application in meeting the business processe
- B. impact of any exposures discovere
- C. business processes served by the applicatio
- D. application's optimizatio

Answer: B

Explanation:

An application control review involves the evaluation of the application's automated controls and an assessment of any exposures resulting from the control weaknesses. The other choices may be objectives of an application audit but are not part of an audit restricted to a review of controls.

NEW QUESTION 415

- (Topic 2)

Which of the following online auditing techniques is most effective for the early detection of errors or irregularities?

- A. Embedded audit module
- B. Integrated test facility
- C. Snapshots
- D. Audit hooks

Answer: D

Explanation:

The audit hook technique involves embedding code in application systems for the examination of selected transactions. This helps an IS auditor to act before an error or an irregularity gets out of hand. An embedded audit module involves embedding specially-written software in the organization's host application system so that application systems are monitored on a selective basis. An integrated test facility is used when it is not practical to use test data, and snapshots are used when an audit trail is required.

NEW QUESTION 418

- (Topic 2)

A substantive test to verify that tape library inventory records are accurate is:

- A. determining whether bar code readers are installe
- B. determining whether the movement of tapes is authorize
- C. conducting a physical count of the tape inventor
- D. checking if receipts and issues of tapes are accurately recorde

Answer: C

Explanation:

A substantive test includes gathering evidence to evaluate the integrity of individual transactions, data or other information. Conducting a physical count of the tape inventory is a substantive test. Choices A, B and D are compliance tests.

NEW QUESTION 422

- (Topic 2)

When performing a computer forensic investigation, in regard to the evidence gathered, an IS auditor should be MOST concerned with:

- A. analysi
- B. evaluatio
- C. preservatio
- D. disclosur

Answer: C

Explanation:

Preservation and documentation of evidence for review by law enforcement and judicial authorities are of primary concern when conducting an investigation. Failure to properly preserve the evidence could jeopardize the acceptance of the evidence in legal proceedings. Analysis, evaluation and disclosure are important but not of primary concern in a forensic investigation.

NEW QUESTION 426

- (Topic 2)

An IS auditor interviewing a payroll clerk finds that the answers do not support job descriptions and documented procedures. Under these circumstances, the IS auditor should:

- A. conclude that the controls are inadequate
- B. expand the scope to include substantive testing
- C. place greater reliance on previous audit
- D. suspend the audit

Answer: B

Explanation:

If the answers provided to an IS auditor's questions are not confirmed by documented procedures or job descriptions, the IS auditor should expand the scope of testing the controls and include additional substantive tests. There is no evidence that whatever controls might exist are either inadequate or adequate. Placing greater reliance on previous audits or suspending the audit are inappropriate actions as they provide no current knowledge of the adequacy of the existing controls.

NEW QUESTION 430

- (Topic 2)

Which of the following audit techniques would BEST aid an auditor in determining whether there have been unauthorized program changes since the last authorized program update?

- A. Test data run
- B. Code review
- C. Automated code comparison
- D. Review of code migration procedures

Answer: C

Explanation:

An automated code comparison is the process of comparing two versions of the same program to determine whether the two correspond. It is an efficient technique because it is an automated procedure. Test data runs permit the auditor to verify the processing of preselected transactions, but provide no evidence about unexercised portions of a program. Code review is the process of reading program source code listings to determine whether the code contains potential errors or inefficient statements. A code review can be used as a means of code comparison but it is inefficient. The review of code migration procedures would not detect program changes.

NEW QUESTION 433

- (Topic 2)

While reviewing sensitive electronic work papers, the IS auditor noticed that they were not encrypted. This could compromise the:

- A. audit trail of the versioning of the work paper
- B. approval of the audit phase
- C. access rights to the work paper
- D. confidentiality of the work paper

Answer: D

Explanation:

Encryption provides confidentiality for the electronic work papers. Audit trails, audit phase approvals and access to the work papers do not, of themselves, affect the confidentiality but are part of the reason for requiring encryption.

NEW QUESTION 434

- (Topic 2)

After initial investigation, an IS auditor has reasons to believe that fraud may be present. The IS auditor should:

- A. expand activities to determine whether an investigation is warranted
- B. report the matter to the audit committee
- C. report the possibility of fraud to top management and ask how they would like to proceed
- D. consult with external legal counsel to determine the course of action to be taken

Answer: A

Explanation:

An IS auditor's responsibilities for detecting fraud include evaluating fraud indicators and deciding whether any additional action is necessary or whether an investigation should be recommended. The IS auditor should notify the appropriate authorities within the organization only if it has determined that the indicators of fraud are sufficient to recommend an investigation. Normally, the IS auditor does not have authority to consult with external legal counsel.

NEW QUESTION 437

- (Topic 2)

Which of the following should an IS auditor use to detect duplicate invoice records within an invoice master file?

- A. Attribute sampling
- B. Generalized audit software (GAS)
- C. Test data
- D. Integrated test facility (ITF)

Answer: B

Explanation:

Generalized audit software (GAS) would enable the auditor to review the entire invoice file to look for those items that meet the selection criteria. Attribute sampling would aid in identifying records meeting specific conditions, but would not compare one record to another to identify duplicates. To detect duplicate invoice records the IS auditor should check all of the items that meet the criteria and not just a sample of the items. Test data are used to verify program processing, but will not identify duplicate records. An integrated test facility (ITF) allows the IS auditor to test transactions through the production system, but would not compare records to identify duplicates.

NEW QUESTION 440

- (Topic 2)

Which of the following would be the MOST effective audit technique for identifying segregation of duties violations in a new enterprise resource planning (ERP) implementation?

- A. Reviewing a report of security rights in the system
- B. Reviewing the complexities of authorization objects
- C. Building a program to identify conflicts in authorization
- D. Examining recent access rights violation cases

Answer: C

Explanation:

Since the objective is to identify violations in segregation of duties, it is necessary to define the logic that will identify conflicts in authorization. A program could be developed to identify these conflicts. A report of security rights in the enterprise resource planning (ERP) system would be voluminous and time consuming to review; therefore, this technique is not as effective as building a program. As complexities increase, it becomes more difficult to verify the effectiveness of the systems and complexity is not, in itself, a link to segregation of duties. It is good practice to review recent access rights violation cases; however, it may require a significant amount of time to truly identify which violations actually resulted from an inappropriate segregation of duties.

NEW QUESTION 445

- (Topic 2)

Which of the following would an IS auditor use to determine if unauthorized modifications were made to production programs?

- A. System log analysis
- B. Compliance testing
- C. Forensic analysis
- D. Analytical review

Answer: B

Explanation:

Determining that only authorized modifications are made to production programs would require the change management process be reviewed to evaluate the existence of a trail of documentary evidence. Compliance testing would help to verify that the change management process has been applied consistently. It is unlikely that the system log analysis would provide information about the modification of programs. Forensic analysis is a specialized technique for criminal investigation. An analytical review assesses the general control environment of an organization.

NEW QUESTION 446

- (Topic 2)

During the collection of forensic evidence, which of the following actions would MOST likely result in the destruction or corruption of evidence on a compromised system?

- A. Dumping the memory content to a file
- B. Generating disk images of the compromised system
- C. Rebooting the system
- D. Removing the system from the network

Answer: C

Explanation:

Rebooting the system may result in a change in the system state and the loss of files and important evidence stored in memory. The other choices are appropriate actions for preserving evidence.

NEW QUESTION 449

- (Topic 2)

An IS auditor who was involved in designing an organization's business continuity plan (BCP) has been assigned to audit the plan. The IS auditor should:

- A. decline the assignment
- B. inform management of the possible conflict of interest after completing the audit assignment
- C. inform the business continuity planning (BCP) team of the possible conflict of interest prior to beginning the assignment

D. communicate the possibility of conflict of interest to management prior to starting the assignment

Answer: D

Explanation:

Communicating the possibility of a conflict of interest to management prior to starting the assignment is the correct answer. A possible conflict of interest, likely to affect the auditor's independence, should be brought to the attention of management prior to starting the assignment. Declining the assignment is not the correct answer because the assignment could be accepted after obtaining management approval. Informing management of the possible conflict of interest after completion of the audit assignment is not correct because approval should be obtained prior to commencement and not after the completion of the assignment. Informing the business continuity planning (BCP) team of the possible conflict of interest prior to starting of the assignment is not the correct answer since the BCP team would not have the authority to decide on this issue.

NEW QUESTION 450

- (Topic 2)

Corrective action has been taken by an auditee immediately after the identification of a reportable finding. The auditor should:

- A. include the finding in the final report, because the IS auditor is responsible for an accurate report of all finding
- B. not include the finding in the final report, because the audit report should include only unresolved finding
- C. not include the finding in the final report, because corrective action can be verified by the IS auditor during the audit
- D. include the finding in the closing meeting for discussion purposes only

Answer: A

Explanation:

Including the finding in the final report is a generally accepted audit practice. If an action is taken after the audit started and before it ended, the audit report should identify the finding and describe the corrective action taken. An audit report should reflect the situation, as it existed at the start of the audit. All corrective actions taken by the auditee should be reported in writing.

NEW QUESTION 453

- (Topic 2)

During an exit interview, in cases where there is disagreement regarding the impact of a finding, an IS auditor should:

- A. ask the auditee to sign a release form accepting full legal responsibility
- B. elaborate on the significance of the finding and the risks of not correcting it
- C. report the disagreement to the audit committee for resolution
- D. accept the auditee's position since they are the process owner

Answer: B

Explanation:

If the auditee disagrees with the impact of a finding, it is important for an IS auditor to elaborate and clarify the risks and exposures, as the auditee may not fully appreciate the magnitude of the exposure. The goal should be to enlighten the auditee or uncover new information of which an IS auditor may not have been aware. Anything that appears to threaten the auditee will lessen effective communications and set up an adversarial relationship. By the same token, an IS auditor should not automatically agree just because the auditee expresses an alternate point of view.

NEW QUESTION 456

- (Topic 2)

Which of the following is the key benefit of control self-assessment (CSA)?

- A. Management ownership of the internal controls supporting business objectives is reinforced
- B. Audit expenses are reduced when the assessment results are an input to external audit work
- C. Improved fraud detection since internal business staff are engaged in testing controls
- D. Internal auditors can shift to a consultative approach by using the results of the assessment

Answer: A

Explanation:

The objective of control self-assessment is to have business management become more aware of the importance of internal control and their responsibility in terms of corporate governance. Reducing audit expenses is not a key benefit of control self-assessment (CSA). Improved fraud detection is important, but not as important as ownership, and is not a principal objective of CSA. CSA may give more insights to internal auditors, allowing them to take a more consultative role; however, this is an additional benefit, not the key benefit.

NEW QUESTION 459

- (Topic 3)

The MOST likely effect of the lack of senior management commitment to IT strategic planning is:

- A. a lack of investment in technology
- B. a lack of a methodology for systems development
- C. technology not aligning with the organization's objective
- D. an absence of control over technology contract

Answer: C

Explanation:

A steering committee should exist to ensure that the IT strategies support the organization's goals. The absence of an information technology committee or a committee not composed of senior managers would be an indication of a lack of top-level management commitment. This condition would increase the risk that IT would not be aligned with the organization's strategy.

NEW QUESTION 463

- (Topic 3)

Which of the following is a function of an IS steering committee?

- A. Monitoring vendor-controlled change control and testing
- B. Ensuring a separation of duties within the information's processing environment
- C. Approving and monitoring major projects, the status of IS plans and budgets
- D. Liaising between the IS department and the end users

Answer: C

Explanation:

The IS steering committee typically serves as a general review board for major IS projects and should not become involved in routine operations; therefore, one of its functions is to approve and monitor major projects, the status of IS plans and budgets. Vendor change control is an outsourcing issue and should be monitored by IS management. Ensuring a separation of duties within the information's processing environment is an IS management responsibility. Liaising between the IS department and the end users is a function of the individual parties and not a committee.

NEW QUESTION 465

- (Topic 3)

An IS steering committee should:

- A. include a mix of members from different departments and staff level
- B. ensure that IS security policies and procedures have been executed properly
- C. have formal terms of reference and maintain minutes of its meeting
- D. be briefed about new trends and products at each meeting by a vendor

Answer: C

Explanation:

It is important to keep detailed steering committee minutes to document the decisions and activities of the IS steering committee, and the board of directors should be informed about those decisions on a timely basis. Choice A is incorrect because only senior management or high-level staff members should be on this committee because of its strategic mission. Choice B is not a responsibility of this committee, but the responsibility of the security administrator. Choice D is incorrect because a vendor should be invited to meetings only when appropriate.

NEW QUESTION 468

- (Topic 3)

Involvement of senior management is MOST important in the development of:

- A. strategic plan
- B. IS policies
- C. IS procedure
- D. standards and guideline

Answer: A

Explanation:

Strategic plans provide the basis for ensuring that the enterprise meets its goals and objectives. Involvement of senior management is critical to ensuring that the plan adequately addresses the established goals and objectives. IS policies, procedures, standards and guidelines are all structured to support the overall strategic plan.

NEW QUESTION 470

- (Topic 3)

Effective IT governance will ensure that the IT plan is consistent with the organization's:

- A. business plan
- B. audit plan
- C. security plan
- D. investment plan

Answer: A

Explanation:

To govern IT effectively, IT and business should be moving in the same direction, requiring that the IT plans are aligned with an organization's business plans. The audit and investment plans are not part of the IT plan, while the security plan should be at a corporate level.

NEW QUESTION 471

- (Topic 3)

IT governance is PRIMARILY the responsibility of the:

- A. chief executive office
- B. board of director
- C. IT steering committe
- D. audit committe

Answer: B

Explanation:

IT governance is primarily the responsibility of the executives and shareholders (as represented by the board of directors). The chief executive officer is instrumental in implementing IT governance per the directions of the board of directors. The IT steering committee monitors and facilitates deployment of IT resources for specific projects in support of business plans. The audit committee reports to the board of directors and should monitor the implementation of audit recommendations.

NEW QUESTION 474

- (Topic 3)

Which of the following IT governance best practices improves strategic alignment?

- A. Supplier and partner risks are manage
- B. A knowledge base on customers, products, markets and processes is in plac
- C. A structure is provided that facilitates the creation and sharing of business informatio
- D. Top management mediate between the imperatives of business and technolog

Answer: D

Explanation:

Top management mediating between the imperatives of business and technology is an IT strategic alignment best practice. Supplier and partner risks being managed is a risk management best practice. A knowledge base on customers, products, markets and processes being in place is an IT value delivery best practice. An infrastructure being provided to facilitate the creation and sharing of business information is an IT value delivery and risk management best practice.

NEW QUESTION 478

- (Topic 3)

Effective IT governance requires organizational structures and processes to ensure that:

- A. the organization's strategies and objectives extend the IT strateg
- B. the business strategy is derived from an IT strateg
- C. IT governance is separate and distinct from the overall governanc
- D. the IT strategy extends the organization's strategies and objective

Answer: D

Explanation:

Effective IT governance requires that board and executive management extend governance to IT and provide the leadership, organizational structures and processes that ensure that the organization's IT sustains and extends the organization's strategies and objectives, and that the strategy is aligned with business strategy. Choice A is incorrect because it is the IT strategy that extends the organizational objectives, not the opposite. IT governance is not an isolated discipline; it must become an integral part of the overall enterprise governance.

NEW QUESTION 483

- (Topic 3)

The MAJOR consideration for an IS auditor reviewing an organization's IT project portfolio is the:

- A. IT budge
- B. existing IT environmen
- C. business pla
- D. investment pla

Answer: C

Explanation:

One of the most important reasons for which projects get funded is how well a project meets an organization's strategic objectives. Portfolio management takes a holistic view of a company's overall IT strategy. IT strategy should be aligned with the business strategy and, hence, reviewing the business plan should be the major consideration. Choices A, B and D are important but secondary to the importance of reviewing the business plan.

NEW QUESTION 486

- (Topic 3)

The ultimate purpose of IT governance is to:

- A. encourage optimal use of I
- B. reduce IT cost
- C. decentralize IT resources across the organizatio
- D. centralize control of I

Answer: A

Explanation:

IT governance is intended to specify the combination of decision rights and accountability that is best for the enterprise. It is different for every enterprise. Reducing IT costs may not be the best IT governance outcome for an enterprise. Decentralizing IT resources across the organization is not always desired, although it may be desired in a decentralized environment. Centralizing control of IT is not always desired. An example of where it might be desired is an enterprise desiring a single point of customer contact.

NEW QUESTION 490

- (Topic 3)

Responsibility for the governance of IT should rest with the:

- A. IT strategy committee
- B. chief information officer (CIO).
- C. audit committee
- D. board of director

Answer: D

Explanation:

Governance is the set of responsibilities and practices exercised by the board and executive management with the goal of providing strategic direction, ensuring that objectives are achieved, ascertaining that risks are managed appropriately and verifying that the enterprise's resources are used responsibly. The audit committee, the chief information officer (CIO) and the IT strategy committee all play a significant role in the successful implementation of IT governance within an organization, but the ultimate accountability resides with the board of directors.

NEW QUESTION 491

- (Topic 3)

Which of the following would BEST provide assurance of the integrity of new staff?

- A. Background screening
- B. References
- C. Bonding
- D. Qualifications listed on a resume

Answer: A

Explanation:

A background screening is the primary method for assuring the integrity of a prospective staff member. References are important and would need to be verified, but they are not as reliable as background screening. Bonding is directed at due-diligence compliance, not at integrity, and qualifications listed on a resume may not be accurate.

NEW QUESTION 492

- (Topic 3)

When an employee is terminated from service, the MOST important action is to:

- A. hand over all of the employee's files to another designated employee
- B. complete a backup of the employee's work
- C. notify other employees of the termination
- D. disable the employee's logical access

Answer: D

Explanation:

There is a probability that a terminated employee may misuse access rights; therefore, disabling the terminated employee's logical access is the most important action to take. All the work of the terminated employee needs to be handed over to a designated employee; however, this should be performed after implementing choice D. All the work of the terminated employee needs to be backed up and the employees need to be notified of the termination of the employee, but this should not precede the action in choice D.

NEW QUESTION 493

- (Topic 3)

Many organizations require an employee to take a mandatory vacation (holiday) of a week or more to:

- A. ensure the employee maintains a good quality of life, which will lead to greater productivity
- B. reduce the opportunity for an employee to commit an improper or illegal act
- C. provide proper cross-training for another employee
- D. eliminate the potential disruption caused when an employee takes vacation one day at a time

Answer: B

Explanation:

Required vacations/holidays of a week or more in duration in which someone other than the regular employee performs the job function is often mandatory for sensitive positions, as this reduces the opportunity to commit improper or illegal acts. During this time it may be possible to discover any fraudulent activity that was taking place. Choices A, C and D could all be organizational benefits from a mandatory vacation policy, but they are not the reason why the policy is established.

NEW QUESTION 496

- (Topic 3)

A local area network (LAN) administrator normally would be restricted from:

- A. having end-user responsibilitie
- B. reporting to the end-user manage
- C. having programming responsibilitie
- D. being responsible for LAN security administratio

Answer: C

Explanation:

A LAN administrator should not have programming responsibilities but may have end-user responsibilities. The LAN administrator may report to the director of the IPF or, in a decentralized operation, to the end-user manager. In small organizations, the LAN administrator may also be responsible for security administration over the LAN.

NEW QUESTION 499

- (Topic 3)

A long-term IS employee with a strong technical background and broad managerial experience has applied for a vacant position in the IS audit department. Determining whether to hire this individual for this position should be based on the individual's experience and:

- A. length of service, since this will help ensure technical competenc
- B. age, as training in audit techniques may be impractica
- C. IS knowledge, since this will bring enhanced credibility to the audit functio
- D. ability, as an IS auditor, to be independent of existing IS relationship

Answer: D

Explanation:

Independence should be continually assessed by the auditor and management. This assessment should consider such factors as changes in personal relationships, financial interests, and prior job assignments and responsibilities. The fact that the employee has worked in IS for many years may not in itself ensure credibility. The audit department's needs should be defined and any candidate should be evaluated against those requirements. The length of service will not ensure technical competency. Evaluating an individual's qualifications based on the age of the individual is not a good criterion and is illegal in many parts of the world.

NEW QUESTION 500

- (Topic 3)

An IS auditor reviewing an organization that uses cross-training practices should assess the risk of:

- A. dependency on a single perso
- B. inadequate succession plannin
- C. one person knowing all parts of a syste
- D. a disruption of operation

Answer: C

Explanation:

Cross-training is a process of training more than one individual to perform a specific job or procedure. This practice helps decrease the dependence on a single person and assists in succession planning. This provides for the backup of personnel in the event of an absence and, thereby, provides for the continuity of operations. However, in using this approach, it is prudent to have first assessed the risk of any person knowing all parts of a system and the related potential exposures. Cross-training reduces the risks addressed in choices A, B and D.

NEW QUESTION 501

- (Topic 3)

Which of the following controls would an IS auditor look for in an environment where duties cannot be appropriately segregated?

- A. Overlapping controls
- B. Boundary controls
- C. Access controls
- D. Compensating controls

Answer: D

Explanation:

Compensating controls are internal controls that are intended to reduce the risk of an existing or potential control weakness that may arise when duties cannot be appropriately segregated. Overlapping controls are two controls addressing the same control objective or exposure. Since primary controls cannot be achieved when duties cannot or are not appropriately segregated, it is difficult to install overlapping controls. Boundary controls establish the interface between the would-be user of a computer system and the computer system itself, and are individual-based, not role-based, controls. Access controls for resources are based on individuals and not on roles.

NEW QUESTION 506

- (Topic 3)

To gain an understanding of the effectiveness of an organization's planning and management of investments in IT assets, an IS auditor should review the:

- A. enterprise data mode
- B. IT balanced scorecard (BSC).

- C. IT organizational structur
- D. historical financial statement

Answer: B

Explanation:

The IT balanced scorecard (BSC) is a tool that provides the bridge between IT objectives and business objectives by supplementing the traditional financial evaluation with measures to evaluate customer satisfaction, internal processes and the ability to innovate. An enterprise data model is a document defining the data structure of an organization and how data interrelate. It is useful, but it does not provide information on investments. The IT organizational structure provides an overview of the functional and reporting relationships in an IT entity. Historical financial statements do not provide information about planning and lack sufficient detail to enable one to fully understand management's activities regarding IT assets. Past costs do not necessarily reflect value, and assets such as data are not represented on the books of accounts.

NEW QUESTION 511

- (Topic 3)

Which of the following is a risk of cross-training?

- A. Increases the dependence on one employee
- B. Does not assist in succession planning
- C. One employee may know all parts of a system
- D. Does not help in achieving a continuity of operations

Answer: C

Explanation:

When cross-training, it would be prudent to first assess the risk of any person knowing all parts of a system and what exposures this may cause. Cross-training has the advantage of decreasing dependence on one employee and, hence, can be part of succession planning. It also provides backup for personnel in the event of absence for any reason and thereby facilitates the continuity of operations.

NEW QUESTION 513

- (Topic 3)

Which of the following is normally a responsibility of the chief security officer (CSO)?

- A. Periodically reviewing and evaluating the security policy
- B. Executing user application and software testing and evaluation
- C. Granting and revoking user access to IT resources
- D. Approving access to data and applications

Answer: A

Explanation:

The role of a chief security officer (CSO) is to ensure that the corporate security policy and controls are adequate to prevent unauthorized access to the company assets, including data, programs and equipment. User application and other software testing and evaluation normally are the responsibility of the staff assigned to development and maintenance. Granting and revoking access to IT resources is usually a function of network or database administrators. Approval of access to data and applications is the duty of the data owner.

NEW QUESTION 514

- (Topic 3)

To support an organization's goals, an IS department should have:

- A. a low-cost philosoph
- B. long- and short-range plan
- C. leading-edge technolog
- D. plans to acquire new hardware and softwar

Answer: B

Explanation:

To ensure its contribution to the realization of an organization's overall goals, the IS department should have long- and short-range plans that are consistent with the organization's broader plans for attaining its goals. Choices A and C are objectives, and plans would be needed to delineate how each of the objectives would be achieved. Choice D could be a part of the overall plan but would be required only if hardware or software is needed to achieve the organizational goals.

NEW QUESTION 516

- (Topic 3)

In reviewing the IS short-range (tactical) plan, an IS auditor should determine whether:

- A. there is an integration of IS and business staffs within project
- B. there is a clear definition of the IS mission and visio
- C. a strategic information technology planning methodology is in plac
- D. the plan correlates business objectives to IS goals and objective

Answer: A

Explanation:

The integration of IS and business staff in projects is an operational issue and should be considered while reviewing the short-range plan. A strategic plan would provide a framework for the IS short-range plan. Choices B, C and D are areas covered by a strategic plan.

NEW QUESTION 520

- (Topic 3)

Which of the following would an IS auditor consider the MOST relevant to short-term planning for an IS department?

- A. Allocating resources
- B. Keeping current with technology advances
- C. Conducting control self-assessment
- D. Evaluating hardware needs

Answer: A

Explanation:

The IS department should specifically consider the manner in which resources are allocated in the short term. Investments in IT need to be aligned with top management strategies, rather than focusing on technology for technology's sake. Conducting control self-assessments and evaluating hardware needs are not as critical as allocating resources during short-term planning for the IS department.
