NEW QUESTION 1
- (Exam Topic 5)
Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.
When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.
Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.
Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.
Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

The Azure Active Directory (Azure AD) Sign-ins report is shown in the following table.

User	Application	Status	Client app	Conditional access	Authentication requirement
User1	Microsoft Office	Success	Mobile Apps and Desktop clients	Not Applied	Single-factor authentication
User1	Office 365 Exchange Online	Success	Offline Address Book	Not Applied	Single-factor authentication
User1	Office 365 Exchange Online	Success	MAPI Over Http	Not Applied	Single-factor authentication
User3	Microsoft Office	Success	Mobile Apps and Desktop clients	Not Applied	Single-factor authentication
User3	Office 365 Exchange Online	Success	Offline Address Book	Not Applied	Single-factor authentication
User3	Office 365 Exchange Online	Success	Autodiscover	Not Applied	Single-factor authentication
User2	Microsoft Office	Success	Mobile Apps and Desktop clients	Not Applied	Single-factor authentication

The Outlook Connection Status for User1 is shown in the following exhibit.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Statements	Yes	No
Microsoft Outlook connection of User1 uses Basic authentication	○	○
Modern Authentication is enabled	○	○
User3 uses the Microsoft Authenticator App to authenticate the Exchange Online	○	○

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Graphical user interface, text, application, email Description automatically generated
Box 1: Yes
The authentication in the Outlook Connection Status exhibit is “Clear”. This means that Basic authentication is being used.
Box 2: No
In the first exhibit, the OAuth2ClientProfileEnabled parameter is False. This means that Modern
Authentication is not enabled. A value of True means that Modern Authentication is enabled. Box 3: No
The Authentication Requirement for User3 in the second exhibit is Single-factor authentication. This means that the Microsoft Authenticator App is not being used.

In the EAC, navigate to Mail flow

>Send connectors, and then click Add +. This starts the New Send
connector
wizard.

- On the first page, enter the following information:

- Name: Enter a descriptive name for the Send connector, for example, Smart host to Internet.
- Type: Select a descriptive value. For example, Internet
oCr ustom.

When you're finished, click Next.

- On the next page, select Route mail through smart hosts, and then click Add +. In the Add smart
host
dialog box that appears, identify the smart host by using one of the following values:

- IP address: For example, 192.168.3.2.
- Fully qualified domain name (FQDN): For example, securitydevice01.contoso.com. Note that the Exchange source servers for the Send connector must be able to resolve the smart host in DNS by using this FQDN.

When you're finished, click Save.

- You can enter multiple smart hosts by repeating Step 3. When you're finished, click Next.
- On the next page, in the Route mail through smart hosts
that's required by the smart host. Valid values are:
section, select the authentication method
Table Description automatically generated

TABLE 1

Authentication mechanism	Description
None	No authentication. For example, when access to the smart host is restricted by the source IP address.
Basic authentication	Basic authentication. Requires a username and password. The username and password are sent in clear text.
Offer basic authentication only after starting TLS	Basic authentication that's encrypted with TLS. This requires a server certificate on the smart host that contains the exact FQDN of the smart host that's defined on the Send connector.
Exchange Server authentication	Generic Security Services application programming interface (GSSAPI) and Mutual GSSAPI authentication.
Externally secured	The connection is presumed to be secured by using a security mechanism that's external to Exchange. The connection may be an Internet Protocol security (IPsec) association or a virtual private network (VPN). Alternatively, the servers may reside in a trusted, physically controlled network.

- When you're finished, click Next.
- On the next page, in the Address space
appears, enter the following information:
section, clickAdd +. In the Add domain
dialog box that

- Type: Verify SMTP is entered.
- Fully Qualified Domain Name (FQDN): Enter an asterisk (*) to indicate the Send connector applies to messages addressed to all external domains. Alternatively, you can enter a specific external domain (for example, contoso.com), or a domain and all subdomains (for example, *.contoso.com).
- Cost: Verify 1 is entered. A lower value indicates a more preferred route for the domains you specified. When you're finished, click Save.

- Back on the previous page, the Scoped send connector
setting is important if your organization has
Exchange servers installed in multiple Active Directory sites:

- If you don't select Scoped send connector, the connector is usable by all transport servers (Exchange 2013 or later Mailbox servers and Exchange 2010 Hub Transport servers) in the entire Active Directory forest. This is the default value.
- If you select Scoped send connector, the connector is only usable by other transport servers in the same Active Directory site.

When you're finished, click Next.

- On the next page, in the Source server
section, clickAdd +. In the Select a Server
dialog box that
appears, select one or more Mailbox servers that you want to use to send outbound mail to the smart host. If you have multiple Mailbox servers in your environment, select the ones that can route mail to the smart host. If you have only one Mailbox server, select that one. After you've selected at least one Mailbox server, click Add, click OK, and then click Finish.

After you create the Send connector, it appears in the Send connector list. From the Send connector list, you can turn the connector on or off. Reference:

NEW QUESTION 52
- (Exam Topic 5)
SIMULATION
Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.
When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.
Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.
Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.
Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You need to ensure that the users in your company can schedule a conference room named Room1 in the company's office by using Microsoft Outlook.
To complete this task, sign in to the Exchange admin center.

A. Mastered
B. Not Mastered

Answer: A

Explanation:

- In the Exchange admin center, navigate to Recipients >Resources.
- To create a room mailbox, click New + >Room mailbox.
- Use the options on the page to specify the settings for the new resource mailbox.

- Room name: Use this box to type a name for the room mailbox. This is the name that's listed in the resource mailbox list in the Exchange admin center and in your organization's address book. This name is required and it can't exceed 64 characters.
- Alias: A room mailbox has an email address so it can receive booking requests. The email address consists of an alias on the left side of the @ symbol, which must be unique in the forest, and your domain name on the right. The alias is required.
- Location, Phone, Capacity: You can use these fields to enter details about the room. However, as explained earlier, you can include some or all of this information in the room name so users can see it.

- When you're finished, click Save to create the room mailbox.

NEW QUESTION 148
- (Exam Topic 5)
You have a hybrid deployment between a Microsoft Exchange Online tenant and an on-premises Exchange Server 2019 organization.

Several users hosted in Microsoft 365 report that when they send email messages to mailboxes hosted in Exchange Server 2019, the messages fail to be delivered.
You need to examine the non-delivery reports (NDRs) sent to the Microsoft 365 mailboxes.
Which two actions should you perform? Each correct answer presents a complete solution.
NOTE: Each correct selection is worth one point.

A. From an on-premises Exchange server, use the transport logs.
B. From an on-premises Exchange server, use the SMTP logs.
C. From the on-premises Exchange admin center, use a message trace.
D. From the Exchange admin center, use a message trace.
E. From the Exchange Management Shell, run the Get-Queue cmdlet.

You have a Microsoft 365 E5 tenant that contains the users shown in the following table.

Name	Member of
User1	Sales
User2	Managers

You have a connector for a remote domain named contoso.com as shown in the following exhibit.

Mail flow scenario
From: Office 365
To: Partner organization

Name
TLS to Contoso

Description
None

Status
Turn it on after saving

When to use the connector
Use only when I have a transport rule set up that redirects messages to this connector.

Routing method
Use the MX record associated with the partner's domain.

Security restrictions
Always use Transport Layer Security (TLS) and connect only if the recipient's email server has a digital certificate.

You have a transport rule as shown in the following exhibit.

User1 sends an email message to user3@contoso.com that has a subject line containing the word Confidential.
User2 sends an email message to user4@contoso.com that has a subject line of New report. The body of the message contains the word confidential.
For each of the following statements, select Yes if the statement is true. Otherwise, select No.

Answer: A

Explanation:
Go to the Microsoft 365 Defender portal and undEemr ail & collaboration policy.
An alert policy consists of the following settings and conditions.
selecPt olicies & rules
>Alert
- Activity the alert is tracking. You create a policy to track an activity or in some cases a few related activities, such a sharing a file with an external user by sharing it, assigning access permissions, or creating an anonymous link. When a user performs the activity defined by the policy, an alert is triggered based on the alert

threshold settings.
- Activity conditions. For most activities, you can define additional conditions that must be met to trigger an alert. Common conditions include IP addresses (so that an alert is triggered when the user performs the activity on a computer with a specific IP address or within an IP address range), whether an alert is triggered if a specific user or users perform that activity, and whether the activity is performed on a specific file name or URL. You can also configure a condition that triggers an alert when the activity is performed by any user in your organization. The available conditions are dependent on the selected activity.

You can also define user tags as a condition of an alert policy. This results in the alerts triggered by the policy to include the context of the impacted user. You can use system user tags or custom user tags.
- When the alert is triggered. You can configure a setting that defines how often an activity can occur before an alert is triggered. This allows you to set up a policy to generate an alert every time an activity matches the policy conditions, when a certain threshold is exceeded, or when the occurrence of the activity the alert is tracking becomes unusual for your organization.

If you select the setting based on unusual activity, Microsoft establishes a baseline value that defines the normal frequency for the selected activity. It takes up to seven days to establish this baseline, during which alerts won't be generated. After the baseline is established, an alert is triggered when the frequency of the activity tracked by the alert policy greatly exceeds the baseline value. For
auditing-related activities (such as file and folder activities), you can establish a baseline based on a single user or based on all users in your organization; for malware-related activities, you can establish a baseline based on a single malware family, a single recipient, or all messages in your organization.
- Alert category. To help with tracking and managing the alerts generated by a policy, you can assign one of the following categories to a policy.
- Data loss prevention
- Information governance
- Mail flow
- Permissions
- Threat management
- Others

When an activity occurs that matches the conditions of the alert policy, the alert that's generated is tagged with the category defined in this setting. This allows you to track and manage alerts that have the
same category setting on the Alerts
based on category.
page in the compliance center because you can sort and filter alerts
- Alert severity. Similar to the alert category, you assign a severity attribute (Low, Medium, High, or Informational) to alert policies. Like the alert category, when an activity occurs that matches the conditions of the alert policy, the alert that's generated is tagged with the same severity level that's set for the alert policy.
Again, this allows you to track and manage alerts that have the same severity setting on the Alerts
page. For
example, you can filter the list of alerts so that only alerts with a High
severity are displayed.
- Email notifications. You can set up the policy so that email notifications are sent (or not sent) to a list of users when an alert is triggered. You can also set a daily notification limit so that once the maximum number of notifications has been reached, no more notifications are sent for the alert during that day. In addition to email notifications, you or other administrators can view the alerts that are triggered by a policy on the Alerts
page. Consider enabling email notifications for alert policies of a specific category or that have a higher severity setting.

Answer: A

Explanation:
You need configure a Retention Policy. You could also use a Litigation Hold but Retention Policies are replacing Litigation Holds in future, so a Retention Policy is the way to go.

- In the Microsoft 365 Compliance Center, go to the Policies section and click Retention.
- Click the New retention policy link.
- Enter a name for the policy (such as "Diego Siciliani Email Retention") and click Next.
- In the retention period, enter 180 days and click Next.
- Ensure that only Exchange email is selected. SharePoint sites, OneDrive accounts and Office 365 groups are also selected by default so you may need to deselect them.
- Click the Choose recipients link for Exchange email.
- Click the Choose recipients button to open a list of recipients.
- Select Admin1 and click the Choose button then click the Done button.
- Click Next.
- Click the Create this policy button.

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.
When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will

be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.
Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.
Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.
